

Chapter NR 257

ALUMINUM FORMING

NR 257.01	Purpose.		
NR 257.02	Applicability.		
NR 257.03	General definitions.		
NR 257.04	Monitoring and reporting requirements.		
NR 257.05	Compliance dates.		
NR 257.06	Removal allowances for pretreatment standards.		
Subchapter I — Rolling With Neat Oils Subcategory			
NR 257.10	Applicability; description of the rolling with neat oils subcategory.		
NR 257.11	Specialized definitions.		
NR 257.12	Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available.		
NR 257.13	Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.		
NR 257.14	New source performance standards.		
NR 257.15	Pretreatment standards for existing sources.		
NR 257.16	Pretreatment standards for new sources.		
Subchapter II — The Rolling With Emulsions Subcategory			
NR 257.20	Applicability; description of the rolling with emulsions subcategory.		
NR 257.21	Specialized definitions.		
NR 257.22	Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available.		
NR 257.23	Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.		
NR 257.24	New source performance standards.		
NR 257.25	Pretreatment standards for existing sources.		
NR 257.26	Pretreatment standards for new sources.		
Subchapter III — The Extrusion Subcategory			
NR 257.30	Applicability; description of the extrusion subcategory.		
NR 257.31	Specialized definitions.		
NR 257.32	Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available.		
NR 257.33	Effluent limitations representing the degree of effluent reduction at-		
	tainable by the application of the best available technology economically achievable.		
NR 257.34	New source performance standards.		
NR 257.35	Pretreatment standards for existing sources.		
NR 257.36	Pretreatment standards for new sources.		
Subchapter IV — The Forging Subcategory			
NR 257.40	Applicability; description of the forging subcategory.		
NR 257.41	Specialized definitions.		
NR 257.44	New source performance standards.		
NR 257.45	Pretreatment standards for existing sources.		
NR 257.46	Pretreatment standards for new sources.		
Subchapter V — The Drawing With Neat Oils Subcategory			
NR 257.50	Applicability; description of the drawing with neat oils subcategory.		
NR 257.51	Specialized definitions.		
NR 257.52	Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available.		
NR 257.53	Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.		
NR 257.54	New source performance standards.		
NR 257.55	Pretreatment standards for existing sources.		
NR 257.56	Pretreatment standards for new sources.		
Subchapter VI — The Drawing With Emulsions or Soaps Subcategory			
NR 257.60	Applicability; description of the drawing with emulsions or soaps subcategory.		
NR 257.61	Specialized definitions.		
NR 257.62	Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available.		
NR 257.63	Effluent limitations representing the degree of effluent reduction attainable by the application of best available technology economically achievable.		
NR 257.64	New source performance standards.		
NR 257.65	Pretreatment standards for existing sources.		
NR 257.66	Pretreatment standards for new sources.		

NR 257.01 Purpose. The purpose of this chapter is to establish effluent limitations, performance standards, and pretreatment standards for the discharge of process wastes from the aluminum forming point source category and its subcategories.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.02 Applicability. (1) This chapter applies to any aluminum forming facility which discharges or may discharge pollutants to waters of the state or which introduces or may introduce pollutants into a publicly owned treatment works.

(2) This chapter applies to chemical or electrochemical treatments applied to the surface of the aluminum when these surface treatments are performed at [the] aluminum forming site. When these surface treatments are not performed at the aluminum forming site, regulations for electroplating, ch. NR 260, or metal finishing, ch. NR 261, apply.

(3) This chapter applies to aluminum casting when the casting is performed as an integral part of aluminum forming and is located at the aluminum forming site. When aluminum forming is performed on the same site as primary aluminum reduction, this chapter applies if the aluminum cools prior to casting. If the aluminum does not cool prior to casting, the regulations for nonferrous metals manufacturing, ch. NR 274, apply.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.03 General definitions. In addition to the definitions set forth in ss. NR 205.03, 205.04, and 211.03, the following definitions apply to the terms used in this chapter:

(1) “Aluminum forming” means a set of manufacturing operations in which aluminum and aluminum alloys are made into semifinished products by hot or cold working, such as rolling, drawing, extruding, and forging, and related operations such as heat treatment and casting.

(2) “Ancillary operation” means a manufacturing operation that has a large flow, discharges significant amounts of pollutants, and may not be present at every plant in a subcategory but when present is an integral part of the aluminum forming process.

(3) “Cleaning or etching operation” means a chemical solution bath and rinse or series of rinses designed to produce a desired surface finish on the workpiece, including conversion coating and anodizing when performed as an integral part of the aluminum forming operations, and the air pollution scrubbers used to control fumes from the chemical solution baths.

(4) “Contact cooling water” means any wastewater which contacts the aluminum workpiece or the raw materials used in aluminum forming.

(5) “Continuous casting” means the production of sheet, rod, or other long shapes by solidifying the metal while it is being

poured through an open ended mold using little or no contact cooling water.

(6) “Degassing” means the removal of dissolved hydrogen from the molten aluminum prior to casting by adding chemicals and bubbling gases through the molten aluminum.

(7) “Direct chill casting” means an operation in which molten aluminum is poured into a water cooled mold, contact cooling water is sprayed onto the aluminum as the aluminum is dropped into the mold, and the aluminum ingot falls into a water bath at the end of the process.

(8) “Drawing” means the process of pulling metal through a die or succession of dies to reduce the metal’s diameter or alter its shape, using either neat oils, emulsions, or soap solutions as a lubricant.

(9) “Emulsion” means a stable dispersion of 2 immiscible liquids, usually oil and water.

(10) “Existing source” means any point source from which pollutants may be discharged either directly into the waters of the state or into a POTW, except a new source as defined in sub. (18).

(11) “Extrusion” means the application of pressure to a billet of aluminum to force the aluminum to flow through a die orifice.

(12) “Forging” means the exertion of pressure on dies or rolls surrounding heated aluminum stock to force the stock to change shape and, when dies are used, to take the shape of the die.

(13) “Heat treatment” means the application of heat of specified temperature and duration to change the physical properties of the metal.

(14) “Hot water seal” means a water bath heated to approximately 180° F used to seal the surface coating on formed aluminum which has been anodized and coated.

(15) “lb/million off-lbs” means pounds of pollutant introduced into the wastestream per million pounds of aluminum or aluminum alloy removed from a forming or ancillary operation at the end of a process cycle for transfer to a different machine or process.

(16) “mg/off-kg” means milligrams of pollutant introduced into the wastestream per kilogram of aluminum or aluminum alloy removed from a forming or ancillary operation at the end of a process cycle for transfer to a different machine or process.

(17) “Neat oil” means an oil used as a lubricant with few or no added impurities.

(18) “New source” means any point source for which construction commenced after November 22, 1982 and from which pollutants may be discharged either directly into waters of the state or into a publicly owned treatment works.

(19) “Rolling” means the reduction in thickness or diameter of a workpiece by passing it between rollers lubricated with either neat oils or emulsions.

(20) “Stationary casting” means the pouring of molten aluminum into molds and allowing the metal to air cool.

(21) “TTO” means the sum of the masses or concentrations of each of the following toxic organic compounds which is found in the discharge at a concentration greater than 0.010 mg/l:

p-chloro-m-cresol	tetrachloroethylene
2-chlorophenol	toluene
2,4-dinitrotoluene	trichloroethylene
1,2-diphenylhydrazine	endosulfan sulfat
ethylbenzene	bis(2-ethylhexyl)phthalate
fluoranthene	diethylphthalate

isophorone	3,4-benzofluoranthene
naphthalene	benzo(k)fluoranthene
N-nitrosodiphenylamine	chrysene
phenol	acenaphthylene
benzo(a)pyrene	anthracene
benzo(ghi)perylene	di-n-butyl phthalate
fluorene	endrin
phenanthrene	endrin aldehyde
dibenzo(a,h)anthracene	PCB-1242, 1254, 1221,1232,1248, 1260, 1016
indeno(1,2,3-c,d)pyrene	acenaphthene
pyrene	

(22) “Wet scrubber” means an air pollution control device used to remove particulates and fumes from air by entraining the pollutants in a water spray.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.04 Monitoring and reporting requirements.

The following special monitoring and reporting requirements apply to all facilities subject to this chapter:

(1) Analyses for cyanide are not required when both of the following conditions are met:

(a) The first wastewater sample of the calendar year has been analyzed and found to contain less than 0.07 mg/l.

(b) The owner or operator of the aluminum forming facility certifies in writing to the department or control authority that cyanide is not and will not be used in the aluminum forming process.

(2) As an alternative pretreatment monitoring procedure, the POTW user may measure and limit oil and grease to the levels shown in the pretreatment standards in lieu of measuring and regulating TTO.

(3) Compliance with the maximum monthly average effluent limitations and pretreatment standards is required regardless of the number of samples analyzed and averaged. The maximum monthly average effluent limitations and pretreatment standards shall be the basis for monthly average discharge limits in direct discharge permits and for pretreatment standards.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.05 Compliance dates. (1) Any existing source subject to this chapter which discharges to waters of the state shall achieve;

(a) The effluent limitations representing BPT by July 1, 1977; and

(b) The effluent limitations representing BAT by July 1, 1984.

(2) Any new source subject to this chapter which discharges to waters of the state shall achieve NSPS at the commencement of discharge.

(3) Any existing source subject to this chapter which discharges process wastewater pollutants to a POTW shall achieve PSES by October 24, 1986.

(4) Any new source subject to this chapter which discharges process wastewater pollutants to a POTW shall achieve PSNS at the commencement of discharge.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.06 Removal allowances for pretreatment standards. Removal allowances for pretreatment standards pursuant to s. NR 211.13 may be granted for the toxic metals lim-

ited by this chapter when the toxic metals are used as indicator pollutants.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

Subchapter I — Rolling With Neat Oils Subcategory

NR 257.10 Applicability; description of the rolling with neat oils subcategory. This subchapter applies to the discharge of pollutants to waters of the state and the introduction of pollutants into POTWs from core and ancillary rolling with neat oils operations.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.11 Specialized definitions. In addition to the definitions set forth in s. NR 257.03, the following definitions apply to the terms used in this subchapter:

(1) “Ancillary operation” means any operation which is not a core operation but which is performed on-site following or preceding the rolling operation, such as continuous rod casting, continuous sheet casting, solution heat treatment, and cleaning or etching.

(2) “Core operation” means rolling using neat oils, roll grinding, sawing, annealing, stationary casting, homogenizing, artificial aging, degreasing, and stamping.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.12 Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of BPT:

Table 1
Core with an annealing furnace scrubber BPT

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum rolled with neat oils	
Chromium	0.0360	0.0147

Subchapter II — The Rolling With Emulsions Subcategory

NR 257.20 Applicability; description of the rolling with emulsions subcategory. This subchapter applies to the discharge of pollutants to waters of the state and the introduction of pollutants into POTWs from core and ancillary rolling with emulsions operations.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.21 Specialized definitions. In addition to the definitions set forth in s. NR 257.03, the following definitions apply to the terms used in this subchapter:

(1) “Ancillary operation” means any operation which is not a core operation but which is performed on-site following or preceding the rolling operation, such as direct chill casting, solution heat treatment, cleaning or etching, and degassing.

(2) “Core operation” means rolling using emulsions, roll grinding, stationary casting, homogenizing, artificial aging, annealing, and sawing.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.22 Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of BPT:

**Table 36
Core operation
BPT**

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum rolled with emulsions	
Chromium	0.057	0.024
Cyanide	0.038	0.016

Subchapter III — The Extrusion Subcategory

NR 257.30 Applicability; description of the extrusion subcategory. This subchapter applies to the discharge of pollutants to waters of the state and the introduction of pollutants into POTWs from core and ancillary extrusion operations.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.31 Specialized definitions. In addition to the

definitions set forth in s. NR 257.03, the following definitions apply to the terms used in this subchapter:

(1) “Ancillary operation” means any operation which is not a core operation but which is performed on-site following or preceding the extrusion operation, such as direct chill casting, press or solution heat treatment, cleaning or etching, degassing, and extrusion press hydraulic fluid leakage.

(2) “Core operation” means extrusion die cleaning, any wet scrubber associated with the die cleaning, dummy block cooling, stationary casting, artificial aging, annealing, degreasing, and sawing.

(3) “Extrusion die cleaning” means an operation in which the steel dies used for aluminum extrusion are cleaned by dipping the dies into a concentrated caustic bath to dissolve the aluminum and then rinsing the dies with water.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.32 Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of BPT:

NR 257.33 Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of BAT. Degassing operations may not discharge wastewater pollutants.

Table 75

Subchapter IV — The Forging Subcategory

NR 257.40 Applicability; description of the forging subcategory. This subchapter applies to the discharge of pollutants to waters of the state and the introduction of pollutants into POTWs from core and ancillary forging operations.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.41 Specialized definitions. In addition to the definitions set forth in s. NR 257.03, the following definitions apply to the terms used in this subchapter:

(1) "Ancillary operation" means any operation which is not a core operation but which is performed on-site following or preceding the forging operation, such as forging air pollution scrubbers, solution heat treatment, cleaning or etching.

(2) "Core operation" means forging, artificial aging, annealing, degreasing, and sawing.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.44 New source performance standards. Any new source subject to this subchapter shall achieve the following performance standards:

Table 107
Core operation NSPS

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum forged	
Chromium	0.019	0.008

Subchapter V — The Drawing With Neat Oils Subcategory

NR 257.50 Applicability; description of the drawing with neat oils subcategory. This subchapter applies to the discharge of pollutants to waters of the state and the introduction of pollutants into POTWs from core and ancillary drawing with neat oils operations.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.51 Specialized definitions. In addition to the definitions set forth in s. NR 257.03, the following definitions apply to the terms used in this subchapter:

(1) "Ancillary operation" means any operation which is not a core operation but which is performed on-site following or preceding the drawing operation, such as continuous rod casting, solution heat treatment, and cleaning or etching.

(2) "Core operation" means drawing with neat oils, stationary casting, artificial aging, annealing, degreasing, sawing, and swaging.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.52 Effluent limitations representing the degree of effluent reduction attainable by application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of BPT:

Table 125
Core operation BPT

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum drawn with neat oils	Maximum for monthly average
Chromium	0.022	0.0090
Cyanide	0.015	0.0050
Zinc	0.073	0.031
Aluminum		
Oil and grease	0.97	0.598
Suspended solids	2.04	0.972
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Solution heat treatment contact cooling water BAT

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum quenched	Maximum for monthly average
Chromium	0.897	0.37
Cyanide	0.591	0.25
Zinc	2.98	1.24
Aluminum	13.10	6.52

Table 171
Cleaning or etching bath BAT

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	Maximum for monthly average
Chromium	0.079	0.032
Cyanide	0.052	0.022
Zinc	0.262	0.11
Aluminum	1.15	0.57

Table 172
Cleaning or etching rinse and hot water seal BAT

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	Maximum for monthly average
Chromium	0.612	0.251
Cyanide	0.404	0.167
Zinc	2.03	0.849
Aluminum	8.95	4.45

Table 173
Cleaning or etching scrubber liquor BAT

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	Maximum for monthly average
Chromium	0.85	0.348
Cyanide	0.561	0.232
Zinc	2.82	1.18
Aluminum	12.43	6.19

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.64 New source performance standards.

Any new source subject to this subchapter shall achieve the following performance standards:

Table 174
Core operation NSPS

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum drawn with emulsions or soaps	Maximum for monthly average
Chromium	0.173	0.070
Cyanide	0.094	0.038
Zinc	0.476	0.196
Aluminum	2.85	1.27
Oil and grease	4.67	4.67
Suspended solids	7.00	5.60
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Table 175
Continuous rod casting spent lubricant NSPS

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum rod cast	Maximum for monthly average
Chromium	0.0008	0.0003
Cyanide	0.0004	0.0002
Zinc	0.0020	0.0008
Aluminum	0.012	0.0053
Oil and grease	0.020	0.020
Suspended solids	0.030	0.024
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Table 176
Continuous rod casting contact cooling water NSPS

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum rod cast	Maximum for monthly average
Chromium	0.072	0.029
Cyanide	0.039	0.016
Zinc	0.198	0.081
Aluminum	1.184	0.526
Oil and grease	1.940	1.940
Suspended solids	2.91	2.33
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Table 177
Solution heat treatment contact cooling water NSPS

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum quenched	Maximum for monthly average
Chromium	0.754	0.31
Cyanide	0.408	0.16
Zinc	2.08	0.86
Aluminum	12.450	5.52
Oil and grease	20.00	20.37
Suspended solids	20.56	24.45
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Table 178
Cleaning or etching bath NSPS

Pollutant or pollutant property	Maximum for any 1 day mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	Maximum for monthly average
Chromium	0.066	0.027
Cyanide	0.036	0.015
Zinc	0.183	0.075
Aluminum	1.094	0.49
Oil and grease	1.79	1.79
Suspended solids	2.69	2.15
pH	(1)	(1)

¹ Within the range of 7.0 to 10 at all times.

Table 179
Cleaning or etching rinse and hot water seal NSPS

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	
Chromium	0.515	0.21
Cyanide	0.278	0.11
Zinc	1.42	0.59
Aluminum	8.50	3.77
Oil and grease	13.911	13.91
Suspended solids	20.87	16.70
pH	(1)	(1)

¹Within the range of 7.0 to 10 at all times.

Table 180
Cleaning or etching scrubber liquor NSPS

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum cleaned or etched	
Chromium	0.72	0.290
Cyanide	0.387	0.155
Zinc	1.97	0.812
Aluminum	1.18	5.24
Oil and grease	19.33	19.33
Suspended solids	29.00	23.20
pH	(1)	(1)

¹Within the range of 7.0 to 10 at all times.

History: Cr. Register, November, 1989, No. 407, eff. 12-1-89.

NR 257.65 Pretreatment standards for existing sources. Except as provided in ss. NR 211.13 and 211.14, any existing source subject to this subchapter which introduces pollutants into a POTW shall comply with ch. NR 211 and achieve the following pretreatment standards for existing sources:

Table 181
Core operation PSES

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum drawn with emulsions or soaps	
Chromium	0.205	0.084
Cyanide	0.135	0.056
Zinc	0.681	0.285
TTO	0.32	
Oil and grease (alternate monitoring parameter)	25.0	12.0

Table 182
Continuous rod casting lubricant PSES

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum rod cast	
Chromium	0.0009	0.0004
Cyanide	0.0006	0.0003
Zinc	0.0029	0.0012
TTO	0.0014	
Oil and grease (alternate monitoring parameter)	0.10	0.052

Table 183
Continuous rod casting contact cooling water PSES

Pollutant or pollutant property	Maximum for any 1 day	Maximum for monthly average
	mg/off-kg (lb/million off-lbs) of aluminum rod cast	
Chromium	0.086	0.035
Cyanide	0.056	0.024
Zinc	0.283	0.119
TTO	0.134	
Oil and grease (alternate monitoring parameter)	10.0	5.1

Table 184
