Earned Income Tax Credit

Introduction

The earned income tax credit (EITC) is offered at both the federal and state levels as a means of providing assistance to lower-income workers. The credit provides a supplement to the wages and self-employment income of such families and is intended to offset the impact of the social security tax and increase the incentive to work.

The federal earned income tax credit has been provided since 1975. In tax years 1991 through 1993, supplemental credits were also provided for health insurance and children under the age of one. The supplemental credits were eliminated beginning in 1994 and the credit was extended to lower-income families without children as part of the federal Revenue Reconciliation Act of 1993. The credit was simplified under the federal Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA), and the income phase-out ranges for married couples applying for the EITC were raised in comparison to the levels for other claimants. The American Recovery and Reinvestment Act of 2009 (ARRA) further increased the income phase-out ranges for married couples. Also, ARRA increased the maximum amount of the credit by adding an additional reimbursement level for taxpayers with three or more children. While ARRA limited both of these changes to tax years 2009 and 2010, the Tax Relief, Unemployment Compensation Reauthorization, and Job Creation Act of 2010 extended these changes to 2011 and 2012. The American Taxpayer Relief Act (ATRA) of 2012 extended the separate credit rate for claimants with three or more children and the higher income phase-out ranges under ARRA through 2017. The Consolidated Appropriations Act of 2016 made both of the temporary ATRA provisions permanent.

A nonrefundable Wisconsin credit was first enacted in 1983 Wisconsin Act 27. The credit was set at 30% of the federal credit and was available only in 1984 and 1985, due to its repeal by 1985 Wisconsin Act 29, effective with the 1986 tax year. Three years later, 1989 Wisconsin Act 31 reinstated a refundable state earned income credit, and for tax years 1989 through 1993, the state credit was calculated as a percentage of the federal credit. Effective for tax year 1994, a separate, stand-alone state credit was established by 1993 Wisconsin Act 16, but 1995 Wisconsin Act 27 modified the credit to again be calculated as a percentage of the federal credit.

Both the federal and Wisconsin credits are refundable so individuals with little or no income tax liability may still receive the credit. In 2015, 22 other states and the District of Columbia offered an earned income credit that was calculated as a percentage of the federal credit. In Minnesota, the working family credit is limited to claimants who received the federal EITC, but the credit is based on the claimant's earned income or federal AGI, rather than a percentage of the federal credit. California also employs its own calculation procedures using either California earned income or federal adjusted gross income. In addition to Wisconsin, 20 states and the District of Columbia offered a refundable EITC, including Maryland where a nonrefundable credit is supplemented with an additional refundable credit for certain taxpayers. Four states (Delaware, Maine, Ohio, and Virginia) provided a nonrefundable credit. Washington has enacted an EITC, but has not yet implemented its credit. Washington is the first state without a state individual income tax to authorize an EITC.

The remainder of this paper presents detailed descriptions and eligibility requirements of the federal and Wisconsin earned income credits, program expenditure data regarding the Wisconsin credit, and a discussion of policy considerations relating to the credit.

Federal Earned Income Tax Credit

Calculation of the Credit

The federal EITC is a refundable credit based on income and family size. In addition, the credit has been affected by filing status since 2002.

The EITC is generally based on earned income, although the credit can also be affected by adjusted gross income (AGI). For claimants whose only income is earned income, the EITC is calculated based on a percentage of earned income up to certain thresholds. The credit gradually increases until earned income reaches the first threshold amount, at which a claimant receives the maximum allowable credit. This income level is referred to as the maximum credit income.

Such claimants are eligible for the maximum credit over a range of income levels, starting at the maximum credit income and ending at a specified phase-out income. For such a claimant whose income exceeds the phase-out income, the credit is gradually reduced as follows: (a) a phase-out rate is applied to the amount by which income exceeds the phase-out income; and (b) the resulting figure is subtracted from the maximum credit to arrive at the allowable credit for a particular claimant. The level of income at which the credit is eliminated is referred to as the maximum income level.

If a claimant has unearned income in addition to earned income, the credit is initially calculated using only earned income, but the phase-out cal-

culatation is made using AGI or earned income, whichever is greater. The components of earned income are described later in the subsection "Income Used in Determining the Credit."

The maximum credit income, phase-out income, and maximum income amounts are adjusted each year for changes in inflation, while the credit percentages and phase-out rates remain the same. The parameters for the federal EITC for tax year 2016 are shown in Table 1.

Table 1: 2016 Federal Credit Provisions*

	No Children	One Child	Two Children	3 or More Children
Credit Percentage	7.65%	34.00%	40.00%	45.00%
Maximum Credit Income	\$6,610	\$9,920	\$13,930	\$13,930
Maximum Credit	506	3,373	5,572	6,269
Phase-Out Income	8,270	18,190	18,190	18,190
Phase-Out Rate	7.65%	15.98%	21.06%	21.06%
Maximum Income	14,880	39,296	44,648	47,955

*For married-joint filers, the phase-out incomes and maximum income levels exceed those shown above by \$5,550.

As shown in the footnote to Table 1, the phase-out income and maximum income amounts are higher for married-joint filers than for other filers. Prior to tax year 2002, filing status was not a factor in the EITC computation, but a higher phase-out income level for joint filers was established in order to reduce the marriage penalty experienced by married individuals. Initially set at an additional \$1,000 in 2002, the higher phase-out income level increased to \$3,000 in 2008 under EGTRRA and was increased to \$5,000 in 2009 under ARRA. Both increases were enacted on a temporary basis and were subject to indexing provisions prior to their scheduled sunset. The American Taxpayer Relief Act of 2012 extended the ARRA provisions through tax year 2017 and extended the EGTRRA provisions permanently. However, the Consolidated Appropriations Act of 2016 made the ARRA provisions permanent. As a result, phase-out income levels for joint filers will be higher by \$5,000 plus an

**Table 2: 2016 Federal Credit Amounts
Single and Head-of-Household Filers**

38,000	0	207	1,400	2,097
40,000	0	0	979	1,675
42,000	0	0	558	1,254
44,000	0	0	136	833
46,000	0	0	0	412
48,000	0	0	0	0

*For claimants other than married-joint filers, the credit is based on the greater of earned income or AGI beginning at \$8,270 of income for claimants with no children and \$18,190 of income for claimants with one or more children. The credit is eliminated at the following income levels: \$14,880 for no children, \$39,296 for one child, \$44,648 for two children, and \$47,955 for three or more children.

indexing adjustment, compared to other filers. For 2016, the phase-out level for joint filers is higher by \$5,550.

Table 2 shows the federal earned income tax credits for 2016 at various levels of income for filers who are single or heads-of-households (the credit is not available to married individuals filing separate returns). Table 3 shows similar information for married couples filing joint returns.

The credit for families with one child is calculated as 34% of earned income until income

**Table 3: 2016 Federal Credit Amounts

52,000	0	0	0	317
54,000	0	0	0	0

*For married-joint filers, the credit is based on the greater of earned income or AGI beginning at \$13,820 of income for claimants with no children and \$23,740 of income for claimants with one or more children. The credit is eliminated at the following income levels: \$20,430 for no children, \$44,846 for one child, \$50,198 for two children, and \$53,505 for three or more children.

equals \$9,920. If income is between \$9,920 and \$18,190 (\$23,740 for joint filers), the maximum credit of \$3,373 is provided. Once income exceeds \$18,190 (\$23,740 for joint filers), the credit is phased-out at a rate of 15.98% (the credit is reduced by 15.98¢ for every additional \$1 in income) until it is eliminated when income exceeds \$39,296 (\$44,846 for joint filers). The same credit structure exists for the other family sizes. This pattern is illustrated in Figure 1, which shows the federal credit for 2016 for single and head-of-

Figure 1: 2016 Federal Earned Income Tax Credit (Single and Head-of-Household)

household claimants. The pattern for married-joint filers would be identical to that shown in Figure 1. However, the income levels at which the credit would begin to be phased out and at which the credit would be completely phased out would exceed those shown in Figure 1 by \$5,550.

Income Used in Determining the Credit

Components of Earned Income. The following types of income are included in earned income for purposes of the EITC: wages; salaries; tips; and other forms of taxable employee compensation (which include net earnings from self-employment, strike benefits, long-term disability benefits received before retirement from an employer-provided plan, and income received as a statutory employee). In addition, since tax year 2004, a taxpayer could choose to either include in, or exclude from, earned income combat pay that is excluded from gross income.

The definition of earned income excludes interest, dividends, social security and railroad retirement benefits (including disability benefits), pensions and annuities, welfare benefits, alimony, child support, nontaxable foster care payments, unemployment compensation, veterans' benefits (including VA rehabilitation benefits), workers' compensation, certain scholarship or

fellowship grants, and income of nonresident aliens not connected with U.S. business.

Earned income also excludes amounts received for services from prison inmates while in prison, Conservation Reserve Program payments if also receiving social security retirement or disability payments, and amounts received for service performed in work activities and from certain community service programs under the federal temporary assistance for needy families (TANF) program. If a claimant files as head-of-household, earned income of the individual's spouse is excluded if the spouse has not been living at the claimant's home at any time during the last six months of the year and the claimant lives in a state that has community property laws. Participants in the Wisconsin Works (W-2) program who are in unsubsidized employment and subsidized jobs are paid a wage, which is counted as earned income under the EITC. In contrast, the W-2 program also provides cash grants to community service job and transitional placement participants, which are not considered earned income under the credit.

Prior to 2002, earned income had included the following nontaxable items in addition to the components of earned income under current law: voluntary salary deferrals, mandatory contribu-

tions to a state or local retirement plan, nontaxable combat zone compensation and military allowances, meals and lodging provided by an employer, housing allowances or rental value of parsonage for the clergy, employer-provided dependent care and adoption benefits, and educational assistance benefits. EGTRRA provided that these items are excluded from earned income. However, the Working Families Tax Relief Act of 2004 provided that a claimant of the EITC could choose to either include in, or exclude from, earned income combat pay that is excluded from gross income for tax purposes. Initially, this provision applied for taxable years ending after October 4, 2004, and before January 1, 2006, but the federal Heroes Earnings Assistance and Relief Act has extended the treatment to apply permanently.

AGI Measure. If a claimant's income exceeds the phase-out income amount, then the greater of AGI or earned income is used to calculate the credit. Prior to 2002, if a claimant's income exceeded the phase-out income level, then the credit amount was based on the greater of earned income and a modified AGI measure.

The modified AGI figure used under prior law required adding back the following amounts to AGI: (a) net capital losses if greater than zero; (b) net losses from trusts and estates; (c) net losses from nonbusiness rents and royalties; (d) 75% (50% before 1998) of net losses from business (unless the loss was from the performance of services as an employee); and (e) tax-exempt interest and nontaxable distributions from pensions, annuities, and IRAs (beginning in 1998).

The current use of AGI, rather than modified AGI, is the same method that was in place prior to 1996.

Disqualified Income. Beginning with tax year 1996, the credit is denied to individuals having disqualified income in excess of a certain limit. The disqualified income limit is \$3,400 for 2016

and is adjusted each year for inflation. Disqualified income is defined as taxable and nontaxable interest income, dividends, net income from nonbusiness rents and royalties, capital gain net income, and net passive income (if greater than zero) that is not self-employment income.

In a ruling issued on November 23, 1998, the Internal Revenue Service (IRS) announced that gains realized on the sale of property used in a trade or business are not counted as investment income. Prior to the ruling, a number of individuals were unable to claim the EITC due to the limitation on disqualified income, particularly farmers who had income from the sale of livestock.

Non-Financial Criteria

In order to claim the federal EITC, an individual must either have a qualifying child or meet the following requirements: (a) not be the dependent or a qualifying child of another taxpayer; (b) be at least 25 years old and not more than 65 before the end of the tax year; and (c) have resided in the U.S. for more than half of the year. A qualifying child must meet all of the following conditions:

1. **Relationship.** A qualifying "child," for purposes of the EITC, may be a natural or adopted child, stepchild, sibling, stepsibling of the claimant, or eligible foster child, or a descendant of any of these.

Prior to 2002, it was required that the child be the natural child, adopted child, grandchild, stepchild, or eligible foster child of the claimant. Brothers, sisters, nieces, and nephews could qualify as eligible foster children. Effective with 2002, brothers and sisters, including step- and half-siblings, along with their descendants are grouped as qualifying children rather than as eligible foster children.

2. **Age.** At the end of the year, the child must be: (a) under 19 years old; (b) a full-time

student under the age of 24; or (c) any age and totally and permanently disabled. Unless the child is totally and permanently disabled, the child must be younger than the claimant.

3. **Residence.** The child must have lived with the claimant in the United States for more than six months during the year (prior to 2002, for the entire year if a foster child). A child who is born or dies during the year qualifies if the child lived with the claimant in the claimant's home for at least half of the year the child was alive.

A qualifying child may not be used by more than one person to claim the EITC. If the claimant is a qualifying child of another taxpayer, the claimant is ineligible to claim the EITC.

Required Returns

In order to receive the federal credit, claimants must file an income tax return (whether or not they would otherwise be required to file) and a separate earned income credit schedule that provides information on qualifying children. Individuals must provide the name and age of each child and the child's social security number.

Advance Payment

Between 1979 and 2010, eligible credit recipients were permitted to receive the federal credit in advance, in their paychecks, rather than receiving the credit as a refund when they filed their federal tax return in the following year. Beginning in 2010, 2009 Wisconsin Act 28 permitted credit recipients to also receive their state credit in advance. However, the federal Education, Jobs, and Medicaid Assistance Act of 2010 eliminated advance receipt of the federal credit, as of January 1, 2011. Because state law sets advance payments of the state credit as a percentage of the advance payments of the federal credit, repeal of the federal advance

payments effectively eliminated advance payments of state credits. The following material describes federal advance payment provisions prior to the repeal.

Employees with qualifying children who expect to qualify for the EITC could elect to receive payment of the federal credit in advance with their regular pay by filing a form with their employer (employees without children were not eligible for advance payment). Advance payment was made by the employer, based on tables provided by the IRS, out of the employee's withheld income tax and the social security payroll taxes of the employee and employer that would otherwise be remitted to the federal government. At the end of the year, the advance payments were reported on the employee's W-2 wage statement and entered as a tax due amount on the employee's income tax return. The full credit was then calculated without consideration of the advance payments. If the credit exceeded the advance payments, a refund was provided to the taxpayer. If the advance payments exceeded the credit, the claimant had to repay the difference.

Advance payment of the credit was limited to 60% of the maximum credit available to a claimant with one qualifying child. Due to the limitation, the maximum advance payment for tax year 2010 was \$1,830 (60% of \$3,050), or approximately \$152 per month, regardless of family size. This provision was intended to prevent recipients of advance payments from incurring a large tax liability at the end of the year if their income had increased and they no longer qualified for the credit. The IRS was directed to notify eligible taxpayers of the advance payment provisions and employers were required to notify their employees about the availability of advance payments of the credit.

Historical data regarding the federal earned income credit is presented in Appendix 1.

State Earned Income Tax Credit

The state earned income tax credit is calculated as a percentage of the federal credit and is claimed on Wisconsin's individual income tax form. The credit is similar to the federal EITC in that it varies by income and family size. Appendix 2 outlines the history of the state earned income tax credit.

Table 4 shows the state credit percentages and maximum credit amounts for 2016. The percentages shown in the table have been in effect since tax year 2011, when 2011 Act 32 reduced the percentages for claimants with two children from 14% to 11% and for claimants with three or more children from 43% to 34%. The percentage for claimants with one child was not changed.

Table 4: 2016 State Credit Provisions

	One Child	Two Children	3 or More Children
Percentage of Federal Credit	4%	11%	34%
Maximum State Credit	\$135	\$613	\$2,131

Prior to 2011, the percentages for all three types of claimants had not changed since 1996. Even when there is no change in the credit percentages, the maximum credit amounts change each year as the federal credit structure changes due to indexing for inflation and federal law changes. Families without children and part-year residents are not eligible for the state EITC.

The 2016 state credits for claimants at various income levels are outlined in Tables 5 and 6. Table 5 shows the state credits by income level for single and head-of-household claimants, while Table 6 shows the credits by income levels for married-joint filers.

The family size adjustment is significantly greater at the state level than under federal law.

Table 5: 2016 State Credit Amounts Single and Head-of-Household Filers

Earned Income	One Child	Two Children	3 or More Children
\$0	\$0	\$0	\$0
2,000	27	88	306
4,000	54	176	612
6,000	82	264	918
8,000	109	352	1,224
10,000	135	440	1,530
12,000	135	528	1,836
14,000	135	613	2,131
16,000	135	613	2,131
18,000	135	613	2,131
20,000	123	571	2,002
22,000	111	525	1,858
24,000	98	478	1,715
26,000	85	432	1,572
28,000	72	386	1,429
30,000	59	339	1,286
32,000	47	293	1,142
34,000	34	247	999
36,000	21	200	856
38,000	8	154	713
40,000	0	108	570
42,000	0	61	426
44,000	0	15	283
46,000	0	0	140
48,000	0	0	0

The maximum state credit for families with three or more children is nearly 16 times the maximum one-child credit, and the maximum credit for two children is more than four and a half times the one-child credit. At the federal level, the maximum credits for two children and for three or more children are both less than two times the maximum one-child credit.

Because the state credit is calculated as a percentage of the federal credit, the state earned income credit exhibits the same pattern as that seen for the federal credit. For families with one child, the credit increases until income reaches \$9,920, the credit levels off at the maximum amount (\$135) until income reaches \$18,190 (\$23,740 for joint filers) and then decreases until it reaches zero at income of \$39,296 or more (\$44,846 or more for joint filers).

**Table 6: 2016 State Credit Amounts
Married-Joint Filers**

Earned Income	One Child	Two Children	3 or More Children
\$0	\$0	\$0	\$0
2,000	27	88	306
4,000	54	176	612
6,000	82	264	918
8,000	109	352	1,224
10,000	135	440	1,530
12,000	135	528	1,836
14,000	135	613	2,131
16,000	135	613	2,131
18,000	135	613	2,131
20,000	135	613	2,131
22,000	135	613	2,131
24,000	133	607	2,113
26,000	120	561	1,969
28,000	108	514	1,826
30,000	95	468	1,683
32,000	82	422	1,540
34,000	69	375	1,397
36,000	57	329	1,253
38,000	44	283	1,110
40,000	31	236	967
42,000	18	190	824
44,000	5	144	681
46,000	0	97	537
48,000	0	51	394
50,000	0	5	251
52,000	0	0	108
54,000	0	0	0

These characteristics are depicted in Figure 2, which shows the state EITC for 2016 for claimants other than married-joint filers. The pattern for married-joint filers would be identical to that shown in Figure 2, except that the phase-out income and maximum income levels would exceed those shown in Figure 2 by \$5,550.

Wisconsin Program Expenditures

The state earned income tax credit is currently paid from two sources: (a) a sum sufficient, general purpose revenue (GPR) appropriation; and (b) federal funding from the temporary assistance for needy families program.

TANF funding was first used to cover a portion of the cost of the EITC in the 1998-99 fiscal year, when it became clear that federal regulations permitted the use of TANF funds for this purpose. According to federal regulations for the TANF program, TANF funding may be used to cover the share of the EITC that is refunded to the claimant (rather than used to reduce the claimant's income tax liability). However, TANF

Figure 2: 2016 State Earned Income Tax Credit (Single and Head-of-Household)

funds may not be used to provide the credit to certain legal immigrants. Based on the federal requirements and on past experience with refundable credits, and allowing for amounts paid to legal immigrants, it was previously estimated that about 80% of EITC costs could be paid with TANF funds. As the EITC income thresholds have increased due to indexing and law changes, the percent of EITC costs that can be paid with TANF funds has been reestimated at approximately 65%. Table 7 reports the EITC funding mix by state fiscal year. It reveals that the share of the credit funded by TANF, which comprised 64.9% of credit expenditures in 2005-06, decreased in each of the three successive years to a 6.8% share of the credit in 2008-09, but has increased in each of the following seven years until the TANF share comprised 66.4% of the credit in 2015-16. This volatility over the 11-year period reflects changes in policies used to balance the state's general fund budget.

Table 7 also shows that between 2005-06 and 2015-16, total EITC payments increased 23.2%, although total payments declined in four of the last six years. The 2.3% reduction in 2010-11 probably reflects the national economic downturn, while the 18.1% decrease in 2011-12 is largely due to the Act 32 reductions in the state's credit percentages. Payment increases occurred from 2005-06 through 2009-10, ranging from

Table 7: Historical Wisconsin EITC Expenditures (\$ in Millions)

Fiscal Year	GPR	TANF	Total	% Change	% TANF
2005-06	\$28.8	\$53.2	\$82.0	5.8%	64.9%

2013	264,660	-0.1	102.2	2.7	386	2.7
2014	252,918	-4.4	99.6	-2.5	394	2.1
2015	252,898	0.0	99.7	0.1	394	0.1

low of 3.8% in 2005-06 to a high of 31.8% in 2009-10. Federal law changes contributed to the increase in 2009-10. Those law changes, effective with tax year 2009, included increasing the phase-out thresholds for married-joint filers, thereby increasing the range of income over which claimants were eligible for the EITC, and creating a third tier at the federal level for families with three or more children. Even though Wisconsin already offered a credit for those families, any expansion of the federal credit automatically increases state tax credit payments because the state credit is set as a percentage of the federal credit.

The effect of these factors is also illustrated in Table 8, but by tax year. The table reports the number of EITC claimants, total credit amounts, and the average EITC since 2005. The total number of EITC claimants increased in each year from 2005 through 2009, but decreased in each of the following years. The decline in the number of EITC claimants helps explain why total EITC payments have declined in four of the last six state fiscal years, as is shown in Table 7.

Table 9 presents the distribution of the state earned income credit for tax year 2015 by Wisconsin adjusted gross income. The table shows 252,898 families claimed \$99.7 million under the state earned income tax credit in 2015.

Table 9: State Earned Income Tax Credit in 2015 by Adjusted Gross Income

Adjusted Gross Income Amount	Count	Percent of Count	Credit Amount	Percent of Amount	Average Credit
Under \$5,000	14,982	5.9%	\$2,752,771	2.8%	\$184

Source: 2015 Individual Income Tax Aggregate Data

More than half of the total credit for 2015 was received by households with income above \$20,000; 54.7% of the total benefit went to the 57.6% of claimants in this range of income. Claimants with AGI under \$10,000 received 10.0% of the benefit and made up 15.6% of the credit recipients, while the remaining 35.3% of the benefit was received by the 26.8% of claimants with AGI of \$10,000 to \$20,000.

Table 10 shows the distribution of the 2015 state credits by number of children. The table illustrates how the state credit is targeted to families with three or more children. These households made up 18.3% of the claimants, but received 59.5% of the program's benefits in 2015. In contrast, families with one qualifying child accounted for 50.9% of the claimants, but received 11.4% of the benefits. The average credit was \$89 for claimants with one child, \$372 for two children, and \$1,280 for three or more

children.

The total credit amounts shown in Tables 8, 9, and 10 differ from the amount in Table 7 because Tables 8, 9, and 10 reflect tax year aggregate data and Table 7 shows fiscal year data.

Policy Considerations

Prior to 1975, assistance to the poor was directed primarily to those who did not have income from work--the elderly, the disabled, and children in families with an absent parent. The earned income tax credit provides assistance to the working poor through a refundable tax credit that acts as a wage supplement.

At the federal level, the earned income tax

credit was originally established as a "work bonus" and was rationalized, in part, as a means of offsetting the impact of the social security tax on low-income families. An additional goal was to increase the incentive to work for such families and lessen the inequities between the working poor and recipients of other categorical aid programs such as aid to families with dependent children (now TANF). Further, by reducing the tax burden of low-income persons, the progressivity of the income tax structure was increased.

In the last half of the 1990s, revisions were made to the federal credit in an attempt to ensure that the credit was directed to lower-income families. Starting with tax year 1996, the disqualified income test was instituted, as was the modification to AGI for purposes of calculating the credit in the phase-out range of income. Effective with the 1998 tax year, the definition of earned income was expanded to include tax-exempt interest and nontaxable distributions from pensions, annuities, and IRAs. However, as described in this paper under "Income Used in Determining the Credit," the modifications to AGI for purposes of calculating the credit and the inclusion of nontaxable income as earned income have been eliminated in order to simplify the credit calculation.

At the state level, the earned income tax credit provides income tax relief to low-income families in a manner that is less costly than increasing the standard deduction or personal exemptions--provisions that could provide a benefit to taxpayers at higher income levels. Also, because it is refundable, the state credit can be viewed as an offset to state and local sales and property taxes. As noted, the state credit incorporates a proportionately greater family size adjustment than the federal provisions.

Other methods to assist the working poor include education and job training, increases in the minimum wage, subsidized child care for low-income workers, and direct grants. The earned

income credit is believed to possess several advantages over these programs. First, funding is targeted directly to those in need of assistance. In addition, administrative efficiency is achieved through the use of the existing income tax system. Finally, the credit's association with the tax system may lessen any stigma associated with traditional welfare-type grant programs.

However, there are a number of criticisms of the earned income tax credit. First, it is argued that appropriate job training and greater employment opportunities are more important factors in promoting the employment of low-income individuals. In addition, the federal and state credits do not directly account for other wealth of the claimant or non-taxed income. Further, higher benefit amounts require a greater phase-out rate in order to exclude higher-income families from eligibility. This results in a higher effective marginal tax rate on recipients within the phase-out income range and may provide a disincentive to earn additional income from wages or self-employment.

It is also argued that the credit may discourage marriage in certain situations. For example, two unmarried individuals might each qualify for the credit if their incomes were considered separately yet not qualify if their incomes were combined on a joint tax return. As noted, the phase-out ranges for joint filers have been increased over those for single individuals, which reduces, but does not eliminate, this aspect of the marriage penalty.

Another aspect of the marriage penalty is the way in which the size of the EITC varies with the number of dependent children. The federal EITC does not increase when a filer has more than three dependent children, so a marriage that creates a family with more than three children may result in a lower EITC than if the individuals had remained unmarried. (The same would be true with the state EITC if a combined family resulted in more than three dependent children).

Inappropriately claimed credits have also posed a problem for the federal credit. In order to address noncompliance, federal law now requires claimants to provide social security numbers for themselves and their children when filing for the credit. This is intended to reduce fraudulent claims by individuals who do not have qualifying children and individuals who are not authorized to work in the U.S. Also, the IRS imposes "due diligence" requirements on paid preparers who fill out EITC claims, and preparers failing to meet those requirements are subject to penalties.

Measures to address inappropriately claimed credits have also been implemented at the state level. A provision enacted in 2013 Wisconsin Act 20 prohibits an individual who files a fraudulent claim for an earned income tax credit from filing for an EITC claim for ten successive tax years and a person who files a reckless EITC claim from applying for the credit for two successive tax years. The provision defines "fraudulent

claim" as a claim that is false or excessive and filed with fraudulent intent and "reckless claim" as a claim that is improper due to reckless or intentional disregard of the provisions related to the credit in state statutes, rules, and regulations. The statutes grant the Department of Revenue (DOR) the authority to determine what is fraudulent or reckless. The prohibition from filing an EITC claim begins with the tax year beginning immediately after the year for which DOR determines that an individual has filed the fraudulent or reckless claim. After the period for which a person has been prohibited from filing for an EITC claim expires, an individual filing an EITC claim is subject to any requirements that DOR may impose to demonstrate eligibility for the credit. In addition to the EITC, this provision applies to all other refundable tax credits offered by the state. In 2015-16, DOR determined that 225 claims with credits totaling \$333,588 were reckless and one EITC claim for \$2,816 was fraudulent.
