Sales and Use Tax

Introduction

Generally, sales tax is a flat rate state and local tax imposed on the purchase price of goods and services at retail sales to consumers. Sales tax is collected by retailers and remitted to the taxing authority. This generally requires a retailer to obtain a seller's permit and keep accurate records of sales and purchases. The goods and services subject to taxation vary by state.

Unlike the sales tax, use tax is imposed upon and remitted by the consumer for the purchase price of goods and services used or consumed within the tax jurisdiction. Use tax prevents a consumer from avoiding sales tax by purchasing goods in a foreign tax jurisdiction with a lower, or nonexistent, sales tax rate. Generally, consumers will receive a credit for any sales tax amounts paid on a transaction completed outside the state. This prevents double taxation of the same sale. Use tax may also apply in various other situations where sales tax is not paid, such as when a seller purchases goods for resale (which is not a retail sale and thus exempt from sales tax) and then uses the goods in a taxable manner in the interim.

In Wisconsin, the state sales and use tax is 5% on the purchase price of taxable retail sales. In addition, counties may impose local sales and use tax of up to 0.5% on the purchase price. As discussed below, in limited circumstances other taxes may apply (such as "room" tax and stadium district tax).

This paper describes the nature and the historical development of sales and use tax in the United States and Wisconsin. It provides collections information and explains how state sales and use tax is collected and charged to consumers. The Appendix provides an overview of Wisconsin

exemptions from sales tax. Detailed information regarding local sales tax and revenues can be found in the Legislative Fiscal Bureau's informational paper entitled, "Local Government Revenue Options."

Historical Development of State Sales Taxation in the U.S.

State sales taxes in the United States developed independently of similar taxes in other countries. The sales tax originated in the occupation taxes that some states imposed on certain business activities in the nineteenth and early twentieth centuries. Beginning in the 1930s, the occupational taxes evolved into the world's first significant retail sales taxes.

The first state retail sales tax was enacted by Mississippi in 1932, replacing a broad business occupation tax. As with other business occupation taxes, the Mississippi tax had been imposed on the receipts of each taxable business. Therefore, a product making its way through the distribution chain was taxed at each stage of production. With conversion to a retail sales tax, only the final sale was taxed, which necessitated raising the tax rate to generate the same amount of revenue. The sales tax was attractive to other states because of its relative administrative simplicity and its productivity as a revenue source, particularly in a time of economic depression. The tax allowed states to design a selective tax on nonessential goods and avoid imposing additional taxes directly on business. Prior to World War II, 22 states joined Mississippi in enacting permanent sales taxes; another six

enacted taxes that expired within two years.

The second wave of sales tax activity began in 1947 with enactment of a tax by Tennessee. By 1960, another 12 states (and the District of Columbia) had enacted or reenacted sales taxes. By 1969, an additional 11 states had done so (including Wisconsin in 1962), bringing the total number of states with sales taxes to the current 45. Five states do not have a state sales tax: Alaska, Delaware, Montana, New Hampshire, and Oregon (Alaska and Montana do, however, have local sales taxes). These five states have relatively small populations, reducing the revenue potential of the tax. Thus, while 90% of the states impose a sales tax, 97.5% of the U.S. population lives in states with a statewide sales tax.

In March, 2000, state revenue departments began an effort to craft a multi-state agreement through the Streamlined Sales Tax Project (SSTP). The impetus for the Project was to simplify and modernize sales and use tax administration among the states so that sellers without sufficient business nexus that are not required to collect the tax under federal law would voluntarily agree to collect and remit tax on sales to residents of participating states. The Streamlined Sales and Use Tax Agreement (SSUTA) was the product of this effort by participating states (those having approval by their own state to participate in the SSTP), with involvement of various members of the business community. Wisconsin was authorized to participate in the development of the SSUTA under 2001 Act 16.

Under the terms of the Agreement, which was adopted by the participating states in November, 2002, and which has been amended several times since then, the Agreement would become effective when at least 10 states comprising at least 20% of the total population of all states imposing a state sales tax had petitioned for membership and been found to be in compliance with the Agreement's requirements by the Agreement's governing board. The SSUTA became effective on October

1, 2005. At that time, there were 18 member states. As of October, 2018, there were 24 member states (23 full member states and one associate member state) participating in the Agreement. Wisconsin modified state tax laws to conform with the Agreement pursuant to 2009 Act 2, and became a member state on October 1, 2009. As of October 1, 2018, 4,190 sellers have voluntarily registered under the SSUTA to collect and remit sales and use tax in member states. Of these voluntary sellers, 2,985 file sales tax returns in Wisconsin and 1,205 indicate that they do not make sales into the state. Information regarding the changes to state tax law from joining the SSUTA is described throughout this paper.

The Nature of Sales Taxation

The most common sales tax structure in use by the states is a single-stage retail sales tax on gross receipts, or sales price, from the sales of certain personal property. However, there is significant variation in the nature and extent of state sales taxes. For purposes of this paper, a distinction is made between narrow-based, product-specific excise taxes, and broad-based taxes; the discussion will be limited to broad-based taxes.

Within the broad-based category, there can be two basic types of tax imposed: a general sales tax with a broadly-defined tax base and specifically-identified exemptions; or a selective tax imposed only on the sales of those products listed in the statutes. These approaches can be combined within a state. For example, Wisconsin imposes a general sales tax on goods and a selective tax on services. Furthermore, the tax can be imposed on only retail sales. Retail sales are generally those sales made to private consumers, but also may include some purchases of certain property to be used, but not resold, in a trade or business.

As state sales taxes have developed over the

years, standards have evolved for evaluating tax structures for their efficiency, equity, administration, and compliance. Due and Mikesell summarize the following sales tax structure guidelines in Sales Taxation: State and Local Structure and Administration:

a. As a uniform tax on consumer expenditures, the sales tax should be designed to facilitate shifting to the ultimate consumer, apply at a uniform rate to all except justifiably-exempt consumption expenditures, and be based on the final consumer price paid.

b. The tax structure should attempt to minimize regressivity in the distribution of the tax burden, based on accepted principles of equity.

c. The tax structure should not impede economic efficiency by indirectly favoring certain types of distribution channels, methods of business operation, or forms of business organization.

d. The tax structure should facilitate administration and compliance.

As tax policy goals, these principles find widely varying degrees of adherence among state sales tax structures. Two main problems with sales tax structure are the regressive nature of the tax and the use of exemptions from the tax base.

Regressivity of the Sales Tax

The sales tax has generally been thought to be inherently regressive because the proportion of an individual's or family's income devoted to consumption declines as income increases. Persons at lower income levels, therefore, tend to pay a larger share of their income in sales tax. The sales tax base and exemptions, however, have a significant impact on the degree of sales tax regressivity. In Wisconsin, the exemption of food, drugs, and certain other items, and the imposition of the tax on certain services, offsets part of the regressive effect.

In 1979, the Wisconsin Department of Revenue (DOR) published the Wisconsin Tax Burden Study, a comprehensive study of the incidence of major Wisconsin taxes. This study found that the sales tax was regressive for persons with total economic income up to \$6,000, but closer to proportional for incomes between \$6,000 and \$40,000. The results for incomes greater than \$40,000 varied with the assumptions used and the particular income level, but tended towards regressivity. A more recent tax burden study by DOR, the 2004 Wisconsin Tax Incidence Study, was released in December, 2004. The focus of the 2004 study was the burden of Wisconsin state and local taxes in tax year 2001. As was the case with the 1979 study, the more recent study examined the sales tax burden under a variety of assumptions. Under each set of assumptions, the sales and use tax was found to be regressive over all income groups in 2001, with the poorest 20% of households paying between 3.3% and 4.0% of income in sales and use tax and the top 1% of households paying between 1.5% and 1.9%.

A 1992 study conducted by Gilbert Metcalf challenged the notion that the sales tax is inherently regressive. Metcalf computed the lifetime incidence of the major state and local taxes used during the 1980s and concluded that the incidence of a general sales tax is not regressive when viewed over a consumer's lifetime purchases. In fact, he contended that the sales tax is as progressive as the income tax when viewed with a lifetime perspective for the following three reasons: (a) the variation in income due to "life cycle effects" is eliminated with a lifetime perspective as a cause of variations in tax incidence, which would tend to make the sales tax look less regressive and the income tax less progressive; (b) federal tax deductibility of the income tax tends to make the income tax less progressive; and (c) exemptions for items with low elasticities (such as food for home consumption) in a majority of states tend to increase the progressivity of the sales tax.

Metcalf argues that the sales tax may seem

regressive if sales tax is computed as a percentage of a household's income in any given year, even considering exemptions for food, prescription drugs, and other necessities. However, he contends, many households at the low end of the income distribution are not poor. Rather, they are spending income from the past or future. For example, some young people who will eventually make a good living borrow to buy now and some retired people live off of savings. Thus, lower-income people may consume more than they earn and may appear very different when viewed with a lifetime income perspective. The Wisconsin Tax Incidence Study also notes that an analysis over a given year may overstate the lifetime burden for lower-income households and therefore overstate the long-term regressivity of the sales tax.

The regressivity of the sales tax is also impacted by whether individual consumers or businesses pay the tax. Sales taxes paid by businesses on their taxable purchases represent business costs that ultimately are reflected in market prices or reduced after-tax profits. If the tax is reflected in higher prices that consumers pay for the products of business, then the tax is shifted forward to consumers. If it is reflected in reduced profits or dividends, then it is borne by the stockholders or owners of the business. A tax tends to be more regressive if consumers ultimately bear the sales tax than if stockholders ultimately bear the tax. This is because consumption expenditures account for a larger proportion of incomes of lower-income families than for higher-income families, while a larger proportion of stock-ownership is in the hands of higher-income families.

A 1981 study by the Advisory Commission on Intergovernmental Relations estimated that the average state received 35% of its sales tax revenues from businesses. The 1979 Wisconsin Tax Burden Study had estimated that individuals paid 55% and businesses paid 45% of the sales tax. A 1999 study by Raymond Ring, Jr., published by the *National Tax Journal*, utilized state sales tax data from two

years, 1979 and 1989. Ring reported that, on average, approximately 59% of the sales tax was paid by in-state consumers and 41% was paid by businesses and tourists. The Ring study estimated that, in Wisconsin, in-state consumers paid 62% of the state sales tax, while businesses and tourists paid the remaining 38%. The most recent study of the Wisconsin tax burden, the 2004 Wisconsin Tax Incidence Study, estimated that individuals paid 67% and businesses paid 33% of sales taxes in tax year 2001.

Exemptions from Sales Tax Base

As noted, most states provide a number of sales tax exemptions, which can have two very different effects. On one hand, exemptions narrow the tax base (which puts a greater burden on the purchasers of goods remaining taxable), impede economic efficiency, create inequities between types of businesses, and complicate administration and compliance of the tax. On the other hand, when enacted in the context of a generally broad-based tax, exemptions can be used selectively to lessen the regressivity of the tax.

It is generally agreed that a strong case for an exemption can be made for food for home consumption. If food is exempt from an otherwise general sales tax, the tax tends to become proportional over the middle range of income levels, although remaining regressive as to the highest and lowest income levels. A strong case can also be made for an exemption for prescription drugs. Most states exempt food and prescription drugs from the sales tax.

One of the broadest exemptions in many states applies to personal and business services. Unlike most consumer expenditures, spending on services tends to increase as income rises. Therefore, imposing the sales tax on most services could reduce the regressivity of the tax.

Providing even a limited number of exemptions tends to decrease the simplicity and administrative efficiency of an otherwise general sales

tax. For this reason, use of an income tax credit approximating a portion of sales taxes paid (for example, average sales taxes paid on food and other essential items) is frequently suggested, and is used in some states, to introduce a more directly progressive element into the sales tax. Such a credit would be most effective if made refundable and thus available to persons with no income tax liability. It could be structured as a flat credit amount limited to persons below a certain income level, or as a declining amount as income rises. Alternative approaches for income tax reductions based on sales taxes paid include an increase in the standard deduction or an increase in the allowable personal exemption credits. With each of these proposals, the initial problem is determining the appropriate amount of relief or credit. Unlike property tax relief credits, such as Wisconsin's homestead credit, there is no convenient measure of the amount of tax actually paid for use in determining the appropriate amount of relief. For this reason, limiting the overall cost of the credit is frequently the dominant issue debated.

Temporary Tax Holidays and Rebates

Sales tax holidays and rebates are two mechanisms states have utilized in recent years to provide targeted tax relief to their residents. Sales tax holidays provide for a limited period of time in which the sales tax does not apply to sales of certain goods and services. Sales tax rebates provide refunds for taxes already paid.

From a fiscal standpoint, sales tax holidays and rebates have the virtue of being limited in scope. Holidays are limited in that tax is waived only for certain goods and because they are in effect only during specified days of the year. In addition, most holidays utilize price thresholds above which the tax-free treatment does not apply. Rebates are limited in that they generally are enacted on a one-time basis, typically in times of strong economic growth.

Sales Tax Holiday. The State of New York

implemented the first sales tax holiday, suspending taxation of all clothing and footwear priced under \$500 purchased during the first week of January, 1997. Subsequently, New York created a sales tax exemption for clothing and footwear selling for less than \$110.

In 2018, 18 states held 25 sales tax holidays. The most common sales tax holidays applied to clothing and footwear (16 states), school supplies (11 states), computers (six states), disaster preparedness items (five states), and energy efficient products (four states). Wisconsin held a holiday in August, 2018, for three of these categories (clothing and school supplies each costing \$75 or less, computers for personal use costing \$750 or less, and school computer supplies for personal use costing \$250 or less). Massachusetts offered a general holiday (with specified exceptions) for single items of tangible personal property costing \$2,500 or less (Louisiana, which offered a similar tax holiday in past years, did not offer a tax holiday in 2018). Mississippi also held a sales tax holiday for firearms, ammunition and hunting supplies. Other 2018 tax holidays were held in Alabama, Florida, Texas, and Virginia for generators.

The SSUTA provides certain administrative requirements for sales tax holidays in order to maintain conformity with the Agreement, should a member state choose to hold such a holiday. For example, the state may only hold a holiday if the product is defined under the Agreement and if the state: (a) provides notice of the holiday at least 60 days prior to the first day of the calendar quarter in which the proposed holiday will begin; (b) does not require a seller to obtain an exemption certificate for the items covered by the holiday during the tax holiday; and (c) does not limit the holiday to a specific entity or for a specific use. A state may limit a product-based exemption under the Agreement to items purchased for personal or non-business use. Certain other administrative requirements, such as the treatment of layaway sales, bundled transactions, coupons and discounts, rain checks, exchanges, and returns, are

also required to maintain conformity under the Agreement.

Proponents argue that sales tax holidays stimulate the economy by drawing in residents from other states for cross-border sales and by generating in-state consumer interest. Further, they emphasize that tax holidays provide a simple method for returning money to specific taxpayers without creating permanent exemptions. For example, a one-time or annual tax holiday may provide tax relief for a favored activity, such as retail sales related to education. Moreover, proponents maintain that tax holidays are especially beneficial for lower-income households. They argue that these households are more responsive to price changes than their wealthier counterparts, and as such will be more likely to take advantage of a tax holiday. Supporters argue further that the savings realized from a tax holiday are proportionally larger, as a share of total income, for those with lower earnings.

Opponents contend that sales tax holidays do not stimulate the economy because they shift the timing of purchases rather than generate new ones. Additionally, cross-border sales may be minimal without significantly large reductions in sales tax (and assuming that foreign residents would not owe use tax to their local jurisdiction).

Opponents also argue that the tax relief benefits of tax holidays may be limited due to poor targeting. First, sellers may capture the tax relief meant for consumers by raising prices during the tax holiday. Second, tax holidays cannot provide tax relief to consumers unless they spend money within a certain time frame. Because wealthy consumers are more likely able to time their purchases than lower-income consumers, wealthy consumers may be more likely to receive tax relief. Third, tax holidays may suffer from ill-defined or arbitrary product inclusion. For example, some students may prefer products which do not qualify as school supplies and many senior citizens have no need for school supplies. As a result, such

persons would not enjoy the benefits of a tax holiday limited to certain school supplies.

Finally, as with other sales tax exemptions, sales tax holidays decrease the simplicity and administrative efficiency of a general sales tax. For a few days a year, every retailer needs to change their accounting and collection methods.

Sales Tax Rebate. Unlike a sales tax holiday, which prevents the collection of taxes in the first instance, a sales tax rebate returns money already collected. This requires a delivery mechanism and a method to determine the size of the rebate. For example, a sales tax rebate could be targeted to low-income families in the form of a refundable tax credit on their income taxes, or more generally provided to all families in the form of a check in the mail.

Since the late 1990s, Colorado, Connecticut, Minnesota, and Wisconsin have used a sales tax rebate to return revenue surpluses to taxpayers. Connecticut's rebate in 1998 was \$50 per qualified citizen. Colorado issued rebates in 1998, 1999, 2000, and 2015 that were based on a person's income. For tax year 2005, Colorado issued a rebate of \$15 (\$30 for married-joint filers). Minnesota, which provided sales tax rebates in 1999, 2000, and 2001, and Wisconsin, with its first rebate in 2000, also based their rebates on a person's income (Wisconsin's 2018 rebate was based on the number of qualified children each taxpayer claimed.) Among other sources, Colorado, Minnesota, and Wisconsin (in 2000) made use of the state income tax form as a primary method of determining eligibility for, and the amount of, the rebate. By contrast, Wisconsin's 2018 rebate required taxpayers to submit eligibility information online or by phone, rather than through the state income tax form. Wisconsin's 2000 and 2018 sales tax rebates are described in greater detail in this paper under the section entitled "The Historical Development of the Wisconsin Sales Tax".

Use Tax

In general, a sales tax is imposed on the purchase price from the sale, lease, or rental of tangible personal property and services identified by state law. A companion use tax is imposed on the storage, use, or other consumption of the property or services purchased from out-of-state retailers if the same sale would have been taxable in the state. A credit is allowed for sales tax paid in the other state or to a federally recognized American Indian tribe or band in this state. All states that impose a sales tax also impose a corresponding use tax. The use tax, rather than the sales tax, is also imposed on private-party transactions of certain registered items, such as boats and automobiles.

The use tax is imposed as a complement to the sales tax in order to prevent consumers from avoiding tax by purchasing taxable goods in other states and to allow state merchants to compete on an equal basis with sellers in other states that have lower sales tax rates or no sales tax. An enforceable use tax assures the equal taxation of all purchases by state residents and gives no competitive advantage to either resident or nonresident sellers.

The sales tax is generally a tax on retailers for the privilege of making taxable sales and is usually passed on by a retailer to its customers. The retailers collect the sales tax from their customers and remit the tax to the state. Unlike the sales tax, the use tax is imposed on the buyer. A buyer may be required to file its own tax return and pay the use tax to the state. (In Wisconsin, consumers have the option of including their use tax on their individual income tax returns.)

As discussed in further detail below, under some circumstances, out-of-state sellers are required to collect the use tax from the buyer and remit the tax to the state in which the buyer is located. For example, a mail order catalog business located in Illinois may have sufficient presence or

connection (nexus) to Wisconsin that it is required to collect the use tax from sales to its Wisconsin customers and remit those collections to the Wisconsin Department of Revenue. As of July, 2018 there were 12,106 active out-of-state use tax registrants (retailers who collect use tax on their sales to Wisconsin residents) and 4,589 active consumer use tax registrants (businesses and other purchasers that regularly pay use tax). In addition, 544 nonregistered consumers filed a use tax return in fiscal year 2018.

Wisconsin entered the SSUTA in part to simplify state use tax laws so that remote sellers would voluntarily collect the tax on taxable sales made into the state. Through October 1, 2018, 2,985 remote sellers had registered with DOR and remitted sales tax returns under SSUTA provisions. The Department of Transportation and the Department of Natural Resources received 659,855 and 134,336 use tax returns for registered items, respectively, totaling \$144.2 million in calendar year 2017.

Use tax may also be reported and paid by individual income tax filers through the Wisconsin individual income tax form. For 2017-18, approximately 55,000 individual income tax filers in Wisconsin paid a total of \$3.4 million in use tax through the individual income tax form. The average use tax payment for such taxpayers was \$61.

The Historical Development of the Wisconsin Sales Tax

The Wisconsin sales tax was first enacted with Chapter 620, Laws of 1961. It was effective in 1962 as a 3% selective tax on designated categories of goods and services. As a companion to the sales tax, a 3% use tax was imposed on items purchased out-of-state but used in Wisconsin, if those items would have been taxable if purchased in the state. Among the major taxable goods were

alcoholic beverages and tobacco, motor vehicles, household furnishings, and recreational equipment. Taxable services included restaurant meals, hotel rooms, telephone service, and admissions to entertainment. Although the tax was only imposed selectively, various exemptions were specified. Definitional exemptions included sales for resale, sales prohibited from taxation under federal law, and sales of property for export. Other exemptions included farm vehicles, purchases by governmental and charitable organizations, and certain occasional sales.

The original sales tax law also included various provisions to facilitate administration and enforcement. Businesses were required to obtain sellers' permits and make monthly reports and tax payments. DOR was authorized to conduct audits and adopt administrative rules regarding a bracket system for tax collections and other matters. A retailers' discount was established to allow sellers to retain 2% of monthly tax collections as compensation for administrative costs.

The 1962 sales tax required that \$55 million of annual collections be paid to towns, villages, and cities for distribution to taxpayers, according to a calculation based in part on a formula then in use for distribution of certain utility tax revenues. The dollar amount of this distribution was modified in subsequent years; in 1971 these provisions were eliminated from the sales tax statutes and made part of the shared revenue statutes.

The sales tax rate was raised to 4% in 1969 and the selective tax on property and services was converted to a general tax on property, with an expanded list of specific exemptions and taxable services. The tax rate was increased again with Chapter 317, Laws of 1981; effective May 1, 1982, the tax rate increased from 4% to 5%. As with the 1961 law that first enacted the sales tax, the 1982 increase in the sales tax was enacted in the context of increased property tax relief. Amounts collected after June 30, 1983, were to be distributed as a supplement to the Wisconsin State Property

Tax Relief (WSPTR) credit. As passed by the Legislature, the provision for use of the one cent sales tax increase for property tax relief was contingent on the Legislature adopting and placing on the April, 1983, referendum ballot a constitutional amendment earmarking a portion of sales tax revenues for school property tax relief and on approval of the amendment by the voters. The Governor vetoed the language that tied the additional property tax relief to future passage and voter approval of the constitutional amendment. Thus, the vetoes established the increase in the property tax credit, but left the continuation of the sales tax rate at 5% past July 1, 1983, contingent upon adoption of the constitutional amendment. However, in January, 1983, faced with a severe general fund deficit, the Legislature permanently extended the sales tax at a 5% rate and eliminated, for the 1984 distribution and thereafter, the property tax supplement created in 1981.

The tax base has frequently been modified since the sales tax was enacted to impose the tax on additional services or to exempt certain items of tangible personal property. 2009 Act 2 expanded the sales tax base to include digital goods and provided that certain digital products are subject to sales tax if the good would have been subject to tax if furnished in tangible form. A list of the currently taxed services and examples of the sales tax exemptions are provided under the following section describing current law. A more detailed list of the sales and use tax exemptions is provided in the Appendix.

The retailers' discount, originally established as 2% of the sales and use tax payable, was reduced to 1% in 1963. The discount was changed again in 1981 from a flat 1% to a three-tiered system: 2% on the first \$10,000 of tax collected annually; 1% on the second \$10,000; and 0.5% on collections over \$20,000. The three-tiered system was eliminated in 1991 in favor of a flat 0.5% of sales and use tax payable. In 1995, the retailers' discount was modified to be the greater of \$10 or 0.5% of sales and use tax liability per reporting

period, not to exceed the amount of tax actually payable. 2009 Act 28 again modified the retailer's discount so that the total amount of the discount may not exceed \$1,000 for any sales tax filer in any filing period.

Certain multi-state sellers, sellers that use a certified automated system (software certified under the SSUTA to calculate and determine the amount of sales tax due in each state and maintain a record of the transactions), and certified service providers (an agent certified under the Agreement to perform a seller's sales and use tax functions, other than the seller's obligation to remit tax on its own purchases) may voluntarily register with DOR and receive collection compensation. These voluntary sellers and certified service providers may retain a portion of sales and use taxes collected and remitted on retail sales based on contracts entered into by the SSTP Governing Board on behalf of member states.

Any person who intentionally fails to remit both the county and state sales taxes collected to the state, or who fraudulently withholds, uses, or spends sales tax receipts, is guilty of criminal theft. The monetary penalty for failure to file a sales tax return is 25% of the sales and use tax due, as estimated by DOR. For retailers that are not required to register with the state but have voluntarily obtained a seller's permit, the Department must notify such sellers of their failure to file and provide at least 30 days for the seller to file the return prior to imposing a 25% penalty.

In addition, 2017 Act 324 created a penalty for sellers who continue to collect tax erroneously on a product that is not taxable. Act 324 stipulates that a seller is entitled to a refund of the amount of sales tax collected from a buyer in error only if the seller returns the tax and related interest to the appropriate buyer. If the seller fails to return the full refund to the buyer within 90 days of the date the seller received the refund, the seller must return any unpaid portion of the refund to DOR as well as a penalty of 25% of the unreturned amount.

Wisconsin Sales Tax Holiday

Wisconsin held a sales tax holiday from August 1 to August 5, 2018. Prior to this time, Wisconsin had never held a sales tax holiday. The holiday exempted from the sales tax clothing and school supplies each costing \$75 or less, school computer supplies for personal use costing \$250 or less, and computers for personal use costing \$750 or less. The holiday was authorized on a one-time basis under 2017 Act 367. At the time Act 367 was enacted, the holiday was estimated to reduce sales tax revenues by \$14 million.

Wisconsin Sales Tax Rebates

Wisconsin provided a child sales tax rebate totaling \$94.3 million to 537,673 claimants (on behalf of 942,599 qualified children) in calendar year 2018. Claimants received a \$100 rebate for each qualified child. The amount of the rebate was intended to approximate the total sales tax paid in 2017 on expenses related to raising children. In order to claim the rebate, the qualified child had to be: (a) the claimant's dependent for tax year 2017; (b) under the age of 18 on December 31, 2017; (c) a U.S. citizen; and (d) a resident of Wisconsin on December 31, 2017. This rebate was authorized under 2017 Act 367.

A one-time sales tax rebate totaling \$688.2 million was also provided to 2.5 million households in calendar year 2000. The rebate amount was based on filing status and Wisconsin adjusted gross income as reported in 1998 state individual income tax returns and ranged from \$184 to \$267 (\$360 to \$534 for married couples filing jointly). Wisconsin residents who did not file a state income tax return or homestead credit claim in 1998 were eligible for the rebate upon filing a form with the Department of Revenue. In addition, nonresidents were allowed to claim a rebate for documented sales taxes paid in 1998. The rebate was authorized under 1999 Wisconsin Act 10.

Streamlined Sales Tax Project (SSTP)

As noted earlier, the SSTP is a multi-state initiative intended to simplify and modernize the collection and administration of sales and use tax nationwide. Although the SSTP aims to improve sales and use tax administration for all types of commerce, a pivotal goal of the project is to simplify the sales and use tax structure to such an extent that sellers will participate by (among other steps) voluntarily collecting tax on their remote sales. The primary impetus behind the SSTP came from state governments, with significant input from the private sector and local governments. As stated in the Agreement, the SSUTA focuses on improving sales and use tax administration systems for all sellers and for all types of commerce through:

- state level administration of sales and use tax collections
- uniformity in the state and local tax base
- uniformity of major tax base definitions
- central, electronic registration system for all member states
- simplification of state and local tax rates
- uniform sourcing rules for all taxable transactions
- simplified administration of exemptions
- simplified tax returns
- simplification of tax remittance
- protection of consumer privacy

Effective October 1, 2009, Wisconsin became the 20th full member state of the SSTP after enactment of 2009 Act 2, which modified certain aspects of the state's sales and use tax laws in order to conform to the terms of the SSUTA and authorized DOR to participate as a member state of the SSTP governing board. The governing board administers the Agreement and enters into

contracts on behalf of member states. The SSUTA does not require participating states to have identical tax bases. However, the Agreement requires states to use uniform definitions in establishing their tax bases and also requires uniform treatment of certain items such as sourcing (generally destination-based) and treatment of drop-shipments (generally the purchaser is liable for remitting use tax). The uniformity provisions modified the tax base and resulted in certain items that were taxable to become exempt (for example, fruit drink with 51% to 99% juice and candy made with flour) and certain sales that were exempt to become taxable (for example, ready-to-drink tea and ice cream cakes prepared by a retailer).

Conforming to the SSUTA required changes to certain administrative provisions, including, for example, certain database requirements, monetary compensation for certain sellers voluntarily registering to collect and remit tax, the use of uniform rounding rules and uniform tax returns, and tax amnesty (under specified conditions) for sellers registering to collect tax under the SSUTA.

Current Law

Wisconsin imposes a 5% general sales tax on the retail sales price from the sale, license, lease, and rental of: (a) tangible personal property (including pre-written computer software); (b) collector coins and stamps; (c) digital goods; (d) certain leased property affixed to real property; and (e) a limited number of services specifically enumerated in the statutes. Counties have the option of imposing an additional 0.5% local sales tax.

The sales tax is generally imposed on the sale, lease, or rental of all tangible personal property not specifically exempted. This contrasts with the treatment of services, where the tax is imposed only on those services specifically listed in the statutes.

Generally, the sales tax does not apply to sales of intangible assets (such as stocks, bonds, insurance certificates, and intellectual property) and real property or fixtures (the real estate transfer fee applies to such sales).

Taxable digital goods are: (a) "specified digital goods," including digital audio works, digital audiovisual works, and digital books; (b) "additional digital goods" specified in statutes that are transferred to the consumer electronically, such as greeting cards, finished artwork, video games, and periodicals; and (c) "digital codes," which are codes that grant a person the right to obtain specified digital goods or additional digital goods.

Use tax is imposed on goods or services purchased out-of-state and used in Wisconsin, if the good or service would be taxable if purchased in Wisconsin. The use tax rate is the same as the sales tax rate. In computing use tax liability, a credit is provided for sales tax paid in the state in which the good or service was purchased. A similar credit is provided for the amount of sales tax paid to a federally recognized American Indian tribe or band in this state.

Taxable Services

Under current law, the following service categories are taxable:

- hotel, motel, and other lodgings not exceeding one continuous month
- admissions to amusement, athletic, entertainment, or recreational events, access to amusement, athletic, entertainment, or recreational devices or facilities, access to clubs, and consideration paid for certain items and furnishings related to bingo
- internet access services (no longer taxable on or after July 1, 2020)

- prepaid calling services
- intrastate, interstate, and international telecommunications services, except interstate 800 services
- specialized or non-repetitive cleaning services to tangible personal property
- ancillary services (such as directory assistance and voice mail services), except for detailed telecommunication services that separately indicate information pertaining to individual calls on a customer's billing statement
- recording telecommunication messages and transmitting them to the purchaser at that purchaser's direction if not incidental to the sale of another service that is not subject to tax
- laundry, dry cleaning, pressing and dyeing services, except: (a) if performed on raw materials or goods in process destined for sale; (b) if performed by the customer through the use of self-service machines; or (c) if performed on cloth diapers by a diaper service
- photographic services
- towing and hauling of motor vehicles by a tow truck
- parking and docking of motor vehicles, aircraft, and boats and also storage of boats
- installation, repair, maintenance, and related services to personal property, other than real property improvements (unless the property being installed or repaired is exempt when sold or constitutes an addition to, or capital improvement of, real property), except for the repair, service, alteration, fitting, cleaning, painting, coating, towing, inspection, and maintenance of any aircraft or aircraft parts and except for services provided by veterinarians

- producing, fabricating, processing, printing, and imprinting services for consumers who furnish the materials, except for printed advertising materials, catalogs, direct mail, and envelopes that are exempt from the sales tax
- cable television or video services, including installation
- warranties and service contracts, including maintenance agreements and computer software maintenance contracts for prewritten computer software, for the future performance of inspection, repair, maintenance, and related services under the contract
- landscaping and lawn maintenance services

Sales Tax Exemptions

Exemptions from the general sales tax are provided for specified types of personal property, transactions, and entities. In some cases, exemptions are provided for items used in the course of business such as manufacturing machinery and equipment, property that becomes an ingredient in the manufacturing process, farm tractors and machines, seeds, and other tangible personal property used in farming. In other cases, the exemptions relate to personal and family needs such as food for home consumption, prescription drugs, and water delivered through mains. In addition, exemptions are provided for sales to certain governmental, educational, and charitable organizations and for specified sales by such organizations. More detailed information about exemptions from the general sales and use tax is provided in the Appendix.

Administration

Sellers of taxable property and services must obtain a business tax registration certificate and a permit for each location from the Department of Revenue (and may be required to make a security deposit not to exceed \$15,000, or a larger amount

from a certified service provider) and periodically file a sales tax return and make payment of tax due. Returns and payment are generally due on a quarterly basis, but the Department may require sellers with a quarterly liability exceeding \$1,200 to report monthly, due on the last day of the next month; sellers with a quarterly liability exceeding \$3,600 may be required to report monthly, due on the 20th day of the next month. Retailers with sales and use tax of \$600 or less have the option of filing annually. The Department may also permit a different reporting period.

Sellers that register with the state through the SSUTA's central registration system and that do not anticipate making sales in Wisconsin are not required to file a return until such time that the seller makes a taxable sale in this state. Once such a sale is made, the seller is required to file a quarterly return due on the last day of the month following the last day in the quarter in which the sale occurred, and is required to continue to file quarterly returns unless DOR notifies the seller in writing of a different filing frequency.

Prior to 2009 Act 28, a single owner entity that was disregarded as a separate entity for income or franchise tax purposes was considered an entity separate from its owner for sales tax purposes. However, this treatment permitted businesses to establish separate entities from their owners to engage in a variety of tax avoidance strategies, such as by establishing a separate transportation company that would qualify for an exemption from the sales tax as a common or contract carrier for purchases of trucks and other transportation equipment and then using those trucks for the sole purpose of hauling products for the owner. Act 28 modified the sales tax return filing requirements for disregarded entities and eliminated the ability of parent companies to engage in these types of tax avoidance activities. Under Act 28, if a single-owner entity is disregarded as a separate entity from its owner for income or franchise tax purposes, then the entity is disregarded as a separate entity for sales tax purposes. Under subsequent

legislation, if the owner elects to file a separate return for each disregarded entity, then a business tax registration certificate is required for each entity. Further, a notice or assessment sent to the owner of a disregarded entity is considered a notice sent to the disregarded entity (and vice versa).

Sellers may deduct the retailers' discount from taxes due, as compensation for administrative costs, equal to the greater of \$10 or 0.5% of the tax liability per reporting period, but not more than the amount of tax actually payable. The amount of the deduction for the retailers' discount may not exceed \$1,000 per reporting period. If reports and payments are delinquent, this discount is forfeited. In addition, a \$20 late filing fee is assessed and the delinquent taxes bear monthly interest of 1.5% until paid if the Department shows that the taxpayer's delinquency was due to willful neglect and not to reasonable cause. Further penalties are imposed for incorrect returns filed due to willful neglect or fraud. Late, non-delinquent payments bear annual interest of 12%, while refunds of overpaid taxes receive interest of 3%.

As noted earlier, certain multi-state sellers, sellers that use a certified automated system, and certified service providers that voluntarily register with DOR, may receive collection compensation in an amount determined by the Department based on contracts with the SSTP Governing Board on behalf of member states. Volunteer sellers using a certified automated system are permitted to retain 1.5% of the taxes due, in addition to the retailer's discount, to a member or associate member state in each year for a period of 24 months to help compensate the seller for the investment in software used to voluntarily collect Wisconsin taxes. This additional compensation is limited to \$10,000 per state per 12-month period. Under the Agreement, compensation for certified service providers for each volunteer seller is provided using a tiered system based on total taxes collected in all member states, at the rates specified below:

Total Taxes Collected in all Member States	Rate of Compensation
\$0 - \$250,000	8%
\$250,000 - \$1,000,000	7
\$1,000,000 - \$2,500,000	6
\$2,500,000 - \$5,000,000	5
\$5,000,000 - \$10,000,000	4
\$10,000,000 - \$25,000,000	3
>\$25,000,000	2

As of October 1, 2018, there is one certified automated system (no sellers in Wisconsin currently use it) and seven certified service providers (used by 1,471 sellers) that are registered with the Streamlined Sales Tax Governing Board. The remaining 2,719 voluntary sellers registered through the Agreement use their own systems to collect and remit taxes and are not eligible for the declining marginal rate of compensation.

Out-of-state vendors and their affiliates doing business with the State of Wisconsin are required to register and collect sales and use tax on all of their Wisconsin sales. If a vendor (or its affiliates) fails to collect sales or use taxes on taxable sales to Wisconsin residents, DOR is required to place the vendor's name on a list that is certified and sent to the Department of Administration. The state is prohibited from doing business with a vendor whose name appears on the list. As of October, 2018, there were 1,052 vendors on the list published by DOR.

Sales and Use Tax Collections

Wisconsin's sales and use tax has been a significant source of state revenue since its enactment. As shown in Table 1, since 2007-08, annual growth in sales tax collections has ranged from a low of -4.3% in 2008-09 to a high of 5.7% in 2014-15. The average annual growth rate has been 2.5% over the period. Prior to 2008-09, sales and use tax collections had never shown a year-over-year decline in revenue; however, this occurred in both

2008-09 and 2009-10. Table 1 also indicates that revenue from the sales tax has constituted approximately one-third of total general fund revenues for most of the period shown.

Table 2 provides a breakdown of sales and use tax collections by type of business for calendar year 2017. Greater detail for businesses in the retail trade and service categories, which account for 46.1% and 28.7% of all sales tax collections, respectively, is provided in Tables 3 and 4. The data for these tables are derived from DOR compilations of sales and use tax reports according to the North American Industry Classification System (NAICS) category to which each business is assigned. Although these data provide the best available indication of the number of sales tax filers and volume of retail sales by each type of business, their reliability is limited because DOR determines the business classifications based on a brief description of the seller's principal business and merchandise, as part of the application for a seller's permit. In the case of a business with sales in a variety of areas or with products that have changed over a period of time, the coding may not accurately reflect the extent and nature of sales by the business. A sales tax filer may represent a single business location, or an owner filing one sales

Table 1: Wisconsin Sales and Use Tax Collections 2007-08 through 2017-18 (\$ In Millions)

	Sales & Use Tax Collections		Sales & Use Tax as % of General Fund Collections
	Amount	% Change	
2007-08	\$4,268.0	2.6%	32.7%
2008-09	4,084.0	-4.3	33.7
2009-10	3,944.2	-3.4	32.5
2010-11	4,109.0	4.2	31.8
2011-12	4,288.7	4.4	31.7
2012-13	4,410.1	2.8	31.3
2013-14	4,628.3	4.9	33.2
2014-15	4,892.1	5.7	33.6
2015-16	5,065.8	3.6	33.6
2016-17	5,223.9	3.1	33.7
2017-18	5,448.1	4.3	33.7

tax return for numerous locations.

Most sales tax collections are from businesses with higher taxable receipts. Such filers include large, high-volume businesses (for example, department stores) that may report sales at several locations in the state, and smaller businesses selling high-cost items at a single location, such as automobiles. In calendar year 2017, 60.8% of sales and use tax registrants had taxable receipts of \$25,000 or less, but paid only 0.4% of the total tax. Alternatively, the 1.1% of businesses with over \$5

Table 2: State Sales and Use Tax Reported in Calendar Year 2017 by Type of Industry (\$ In Millions)

Type of Industry	Sales Tax Filers		Sales Tax	
	Number	% of Total	Amount	% of Total
Agriculture, Forestry, Fishing and Hunting	1,911	1.1%	\$3.7	0.1%
Construction	7,873	4.4	106.8	2.1
Mining, Quarrying, and Oil and Gas Extraction	249	0.1	5.9	0.1
Utilities	188	0.1	226.4	4.4
Information	3,006	1.7	406.5	7.9
Manufacturing	13,958	7.8	192.0	3.7
Retail Trade	50,729	28.2	2,368.5	46.1
Services	85,623	47.7	1,474.2	28.7
Wholesale Trade	7,969	4.4	320.8	6.2
Transportation and Warehousing	1,562	0.9	14.1	0.3
*Other	<u>6,564</u>	<u>3.6</u>	<u>18.4</u>	<u>0.4</u>
Total	179,632	100.0%	\$5,137.3	100.0%

*\$18.4 million was remitted in 2017 for miscellaneous, unknown, and unclassified NAICS codes. Occasional sales totaled \$137.0 million in 2017, but are not included in this table.

million in taxable receipts accounted for 69.6% of total tax collections. Overall, only 10.1% of businesses had taxable receipts in 2017 of over \$500,000, but they collected 91.6% of the tax.

Table 3 shows the distribution of taxable sales and the number of business filers operating in the retail trade sector. The "Miscellaneous Store Retailers" category in Table 3 is comprised of businesses with fixed point-of-sale locations with unique characteristics, such as florists, used merchandise stores, and pet supply stores. "Miscellaneous Store Retailers" in calendar year 2017 generated only 8.3% of tax collections, but accounted

for 39.8% of all retail trade sales tax filers. The category for "General Merchandise Stores," on the other hand, generated 19.0% of collections, yet made up only 2.0% of total filers. These distinctions reflect differences in the nature and cost of products sold, the amount of taxable sales as a percent of total sales, the number of retail locations reported by each filer, and the average size of each retail location for a given category of retailers, as measured by sales volume.

Table 4 shows similar data for service sector sales tax filers. "Accommodations and Food Services" accounted for 40.3% of sales tax in the

service sector, and 22.5% of such filers.

Local Sales Taxes

Several types of local sales taxes are levied in Wisconsin. Wisconsin counties are permitted to impose a 0.5% county sales tax. Currently, 66 of the state's 72 counties have such a tax in place. The other types of local sales taxes levied in the state are local exposition district taxes, local professional baseball park district taxes, local professional basketball stadium district ticket and food and beverage taxes, and premier resort area taxes. Detailed information regarding all the local sales taxes can be found in the Legislative Fiscal Bureau's informational paper entitled, "Local Government Revenue Options."

Tax Rate Comparison with Other States

A total of 45 states and the District of Columbia impose a state sales tax. The five states that do not have a sales tax are Alaska, Delaware, Montana, New Hampshire, and Oregon, although Delaware imposes gross receipts taxes on certain industries and a use tax on lessees. In addition, 38 states collect local sales tax, including Alaska and Montana.

As of November, 2018, state sales tax rates ranged from 2.9% (Colorado) to 7.25% (California), exclusive of optional local sales taxes. It should be noted that California's 7.25% tax rate includes a 1.25% county sales and use tax, which each county in the state has enacted. Wisconsin has the lowest sales and use tax rate at 5% as compared to nearby state rates (Indiana 7%, Minnesota 6.875%, Illinois 6.25%, and Michigan and Iowa 6%). Sales tax rates and the treatment of

commonly exempt items by the states appear in Table 5.

Among the major factors in determining the relative fiscal role of the sales tax in the states are the definition of the tax base (taxable sales), and the tax rate. Tax rate increases are, administratively, the simplest means of increasing revenue. Throughout most of the 1990s, many states realized substantial year-over-year revenue gains from their primary taxes, including the sales tax. Early in 2001, however, this trend began to reverse as an economic recession took hold. Many states responded to their declining fiscal position by, among other measures, raising their sales tax rates. States responded similarly to the 2008-2009 recession with (usually temporary) sales tax rate increases. Since 2000, nearly half of the states have enacted sales tax rate increases, sometimes on a temporary basis. Since this paper was last updated in January, 2017, several states enacted tax rate changes. Washington, D.C. increased its rate from 5.75% to 6%, New Jersey reduced its rate from 6.875% to 6.625%, and Louisiana reduced its rate from 5% to 4.45%.

Tax Base Comparison with Other States

The sales tax base varies widely among the states, particularly with regard to services. Most of the 45 states (and the District of Columbia) with a sales tax impose the tax on personal property generally, subject to various exclusions and exemptions. Since the tax is in principle imposed on final sales or consumer purchases, most states, like Wisconsin, exclude sales for resale. Also commonly excluded are sales of property that is consumed in the production of, or becomes an ingredient of, other property for sale; many states also exclude or exempt some goods used in the production of property that are not consumed in the process. A number of states exempt machinery used in the production process, and most states exempt

agricultural supplies and equipment used directly in farming.

As shown in Table 5, exemptions for property sold for personal consumption also vary widely. Some exemptions apply to goods that are considered essential. For example, 33 states exempt food sold for home consumption, 33 states exempt residential energy (heating fuel, electricity, and natural gas) in whole or part, and 11 states exempt non-prescription drugs. Although not shown in Table 5, prescription drugs are exempt in every state except Illinois, which taxes them at a reduced rate. Gasoline, which is typically subject to a separate excise tax, is exempt from the general sales tax in 40 states, while newspapers and periodicals are exempt in 34 states.

A number of states provide a partial exemption for items shown in Table 5. For example, Wisconsin provides an exemption for residential sales of natural gas and electricity only during the months of November through April. For more detailed information regarding the sales tax structures in other states, see the U.S. Master Sales and Use Tax Guide, published by the CCH Incorporated.

The first sales taxes enacted by states extended only to certain personal property. The overall tax base was fairly limited, and it was generally believed that restricting the tax to goods facilitated administration and avoided taxing labor. There has been a gradual inclusion of some services in the sales tax base as the tax is increasingly perceived as being passed on to consumers, like the tax on goods, as opposed to being a tax on labor. As the base has broadened to include many goods, continuing to exempt services has become more of an administrative hindrance than an aid. State revenue needs also have given impetus to this movement. When Wisconsin enacted its selective sales tax on services in 1961, it included several of the services most frequently taxed in other states and has added other services since then.

In most states, the sales tax is imposed on the

retail sales of tangible personal property; only services that are explicitly listed are also taxed. Thus, charges for services such as cleaning, laundering, or barbering, if not specifically listed as taxable, are tax-free. However, in such cases, materials used or consumed in the performance of a tax-free service are generally taxable when sold to the service provider. Some states specify that if a transfer of property is inconsequential to the sale of a service, the transfer of that property is not taxed to the consumer. On the other hand, if the service is inconsequential to the transfer of property, the entire transaction is taxed.

Table 6 shows the taxability of certain services in each state and the District of Columbia. Professional and personal services include, but are not limited to, services provided by attorneys, accountants, architects, barbers, beauticians, and laundries.

As shown in Table 6, services industries subject to the sales and use tax vary widely across the states. Some of the more commonly taxed services are: the labor portion of repair services, taxed in 22 states, and janitorial services, taxed in 18 states. Some other taxable services are transportation, taxed in 13 states, personal/professional, taxed in four states, and medical, taxed in two states. Several states tax a limited number of services within these service industries. An additional 19 states tax some personal/professional services, seven states tax some transportation services, four states tax some janitorial services, two states tax some repair services, and one state taxes some medical services.

In contrast to states that tax services selectively, the states of Hawaii, New Mexico, South Dakota, and West Virginia impose a general sales tax on services as well as on goods, with specific exemptions provided. Hawaii imposes an excise tax on the gross proceeds of sales on businesses, which is passed on to consumers like a sales tax. Certain entities are exempt from the tax, including public utilities owned by the state, certain charitable nonprofit organizations, and hospitals.

Table 5: State Sales Tax Rates and Treatment of Commonly Exempt Items: December, 2018

*Additional local sales taxes may apply.

•Variable tax rates for select items.

For Exemptions: T--Taxable; E--Fully or Partially Exempt (Consult sources identified at bottom for more detailed information.)

- Notes: California: Every county has adopted a 1.25% sales tax rate, resulting in a uniform statewide rate of 7.25%
 Delaware: Imposes a merchants and manufacturers gross receipts tax and a use tax on leases.
 Nevada: Local sales tax minimum of 2.25% included.
 Rhode Island: Tax rate will be reduced to 6.5% on the date that the state requires sellers to collect tax on remote sales following a federal law requiring remote sellers to collect and remit sales taxes.
 Utah: Includes uniform statewide 1.25% local tax rate.
 Virginia: Every locality imposes a 1% local sales tax rate, resulting in a uniform statewide rate of 5.3%
 Wyoming: The rate is reduced to 3.5% on July 1 of any year in which the unappropriated general fund balance at the end of the current budget period exceeds \$35 million.

T -Taxable

E -- Fully or Partially Exempt (More detailed information regarding exemptions may be found in the sources identified below.)

Services are generally taxable, with specified exemptions.

* A limited number of services are taxable.

Source: Commerce Clearing House publications.

The New Mexico tax is structured as a gross receipts tax on persons for the privilege of engaging in business in the state. The tax is generally imposed on receipts from all property sold or leased and services performed, with specific exemptions or deductions provided for a number of items (for example, certain agricultural services, telecommunication services for internet access, health care services, and construction and manufacturing-related services).

South Dakota generally imposes a retail sales tax on sales of property and services, and provides exemptions such as certain membership organization fees, health, educational, social, agricultural, and certain financial and construction services. Finally, West Virginia imposes a general consumer sales and service tax on the privilege of selling tangible personal property and services unless specifically exempted, such as professional or personal services and contracting services.

Nexus, Remote Sales, and Electronic Commerce

U.S. Supreme Court precedent had traditionally prevented a state from imposing tax upon a business without a substantial physical presence in the state, such as a brick and mortar store or resident employees. The U.S. Constitution imposes two limitations on taxing jurisdiction: the due process clause (requiring a minimum connection between the taxpayer's interstate activities and the

state) and the commerce clause (requiring a substantial connection between the state and the taxed activity). The traditional test to determine if a tax unfairly burdens interstate commerce was laid out by the U.S. Supreme Court in *Complete Auto Transit Inc. v. Brady*. Under *Complete Auto*, the tax is permitted if it: (a) applies to an activity with a substantial nexus with the taxing state; (b) is fairly apportioned; (c) does not discriminate against interstate commerce; and (d) is fairly related to the services the state provides.

In 1992, the Supreme Court announced a rule in *Quill Corp. v. North Dakota*, which, until June 2018, upheld a bright line physical presence requirement to impose sales and use tax. The Supreme Court held in *Quill* that when this physical presence nexus is absent, states' efforts to collect taxes on remote sales place an undue burden on interstate commerce and thereby violate the U.S. Constitution.

However, in the 2018 decision in *Wayfair v. South Dakota*, the Court overturned *Quill's* physical presence requirement. This decision permits states to require out-of-state sellers lacking a physical presence in the state to collect and remit sales and use tax, provided the imposition of the tax meets the requirements established in *Complete Auto* (described above).

While the Court did not specify its own nexus threshold in *Wayfair*, it found that South Dakota's threshold of 200 annual transactions or \$100,000 in annual sales into the state satisfied the requirements laid out in *Complete Auto*. This has prompted several other states to adopt similar thresholds for the collection of sales and use tax on sales by remote sellers.

Opponents of the *Wayfair* decision worry that requiring vendors to collect and remit sales taxes on out-of-state purchases will subject firms to the undue burden of calculating taxes, for thousands of taxing jurisdictions nationwide, that differ in their rates, in the categories included in their tax

bases, and in the definitions of goods within those categories. To reduce the burden of compliance, critics argue Congress should mandate that states join the SSUTA before imposing sales tax collection obligations on remote sellers.

Congressional Action. In its *Quill* decision, the Supreme Court concluded that the commerce clause empowers Congress to give states the authority to require vendors to collect and remit sales tax on remote purchases. Despite the recognition of its authority, Congress has not responded to *Quill* for over 26 years.

However, legislation has been periodically introduced to address the imposition of sales tax on remote sellers. For example, the Online Sales Simplicity and Small Business Relief Act was introduced in September 2018, in the wake of the *Wayfair* decision. The legislation would exempt businesses with \$10 million or less in nationwide sales from sales tax collection obligations until all states that impose a sales tax join a compact (like the SSUTA) to simplify sales tax collection. As of the day of publication of this paper, Congress has not passed the Online Sales Simplicity Act or any other bills concerning the taxation of remote sellers.

State Responses to Wayfair. Following the Court's decision in *Wayfair*, several states have moved to enact rules or legislation in an attempt to require use tax collection on internet companies that make sales into their states.

Beginning on October 1, 2018, DOR requires remote sellers to collect and remit sales and use tax on sales of taxable goods and services in Wisconsin. Consistent with South Dakota's economic nexus law upheld in *Wayfair*, Wisconsin establishes a small seller exception for sellers with fewer than 200 annual transactions or \$100,000 or less in annual sales into the state. 2017 Act 368 codifies this economic nexus threshold in statute and requires remote sellers that meet or exceed this threshold to register with DOR and collect

state sales and use tax. DOR estimates this threshold will exempt approximately 12% of all sellers that make sales in Wisconsin from sales tax collection obligations, reflecting approximately \$21 million in foregone sales tax revenue in calendar year 2019.

Wisconsin Remote Sales

Goods and services purchased by Wisconsin residents over the internet are subject to the Wisconsin sales and use tax in the same manner that they would be if they were purchased through other means (such as through a mail-order catalog). As with other sales, Wisconsin vendors selling over the internet to Wisconsin customers are required to collect the sales tax on taxable goods and services.

It is the buyer's responsibility to pay the Wisconsin use tax if the seller is an out-of-state seller that qualifies for the small seller exception and has not voluntarily agreed to collect the tax.

Wisconsin law considers all out-of-state vendors, to the extent permitted under federal law, as retailers engaged in business within the state for use tax purposes if they sell tangible personal property or other taxable items or services for storage, use, or other consumption in Wisconsin. Unless a specific exemption applies, out-of-state sellers have nexus under Wisconsin law and are thus required to collect use tax if they:

- conduct 200 or more transactions in Wisconsin or make more than \$100,000 in annual gross sales into Wisconsin in either the current or previous year;
- own real property in Wisconsin;
- lease or rent out tangible personal property, collector coins and stamps, or fixtures in Wisconsin;
- maintain (either directly or through an agent or subsidiary) an office, place of distribution, sales

or sample room, warehouse or storage place, or other place of business;

- have a related affiliate which uses facilities or employees in Wisconsin to advertise, promote, or facilitate the establishment of or market for in-state sales of items for the seller or for providing services to the seller's customers in Wisconsin (such as resolving complaints and accepting returns);
- service, repair, or install equipment or other tangible personal property or taxable goods in Wisconsin;
- deliver taxable goods into Wisconsin in a vehicle they operate;
- perform construction activities in Wisconsin; or
- have any representative (including a manufacturer's representative, agent, salesperson, canvasser, or solicitor) operating in Wisconsin, either directly or through a subsidiary, for the purpose of performing any of the actions described above (even for non-taxable services) or for selling, delivering, or taking orders for any tangible personal property or services.

Taxation of Internet Access Service

Wisconsin law imposes the 5% state sales and use tax, as well as county and stadium district sales and use taxes, on telecommunications services. DOR had interpreted the general statute imposing the sales tax on telecommunications services to include internet access charges. Administrative rules relating to the sales tax on telecommunications services enumerated fifteen taxable telecommunications services, including internet access services. 2009 Act 2 amended state law to specifically state that internet access service is taxable.

The federal Internet Tax Freedom Act of 1998 created a moratorium on taxation of charges for

internet services. This moratorium was initially temporary, but was extended by Congress several times and made permanent as part of the Trade Facilitation and Trade Enforcement Act of 2015. Wisconsin, as one of nine states that imposed and enforced a tax on internet access services prior to October 1, 1998, received grandfather protection from the moratorium until 2020. Pursuant to 2017 Act 59, Wisconsin's sales tax on internet access services is repealed beginning July 1, 2020.

In addition to the moratorium on state taxation of internet access charges, the Internet Tax Freedom Act of 1998, as amended, imposes a moratorium on "multiple and discriminatory taxes" on

electronic commerce. With certain exceptions, this provision prohibits taxation of a single transaction by more than one state or political subdivision of a state. In addition, the provision limits the taxes on electronic commerce to taxes that would be imposed on the same products and services sold by other means.

The federal ban on taxation of internet access charges has sometimes been mistakenly understood to apply to all taxes on internet sales. However, the prohibition against multiple and discriminatory taxation of a single transaction does not negate existing state sales and use tax laws.

APPENDIX

Wisconsin Sales Tax Exemptions

Exemptions from the general sales and use tax are provided for the following types of personal property or sales:

Business Enterprises

- property that is used exclusively and directly by a manufacturer in manufacturing an article of tangible personal property that is destined for sale and that: (a) becomes an ingredient or component part of the manufactured item that is subsequently sold; or (b), is consumed or destroyed or loses its identity in manufacturing the item that is subsequently sold
- fuel and electricity consumed in manufacturing tangible personal property in Wisconsin
- property that is used exclusively and directly by a manufacturer in manufacturing shoppers guides, newspapers, or periodicals and that becomes an ingredient or component or is consumed or destroyed in the production of newspapers, periodicals, or shoppers guides
- modular and manufactured homes that are used in real property construction activities outside this state
- property and services sold by a construction contractor as part of a contract if the total sales price of all products is less than 10% of the total amount of the contract
- mobile units used for mixing and processing
- machinery and equipment, including safety attachments and repair parts, used exclusively and directly by a manufacturer in manufacturing
- packing and shipping materials and containers used to transfer merchandise to customers or to pack or ship meat products
- fuels used by utilities to generate power and the portion of fuel converted to steam for the purpose of resale by persons other than utilities
- aircraft, including parts and fuel, for use in interstate or foreign commerce
- motor vehicles, including parts, sold to common or contract carriers
- motor vehicles not required to be licensed and used for recycling or waste reduction activities
- federal tax imposed on the seller in a retail sale of a heavy truck or trailer that is separately stated on the invoice, bill of sale, or similar document that the seller gives to the purchaser
- motion picture film or tape, motion pictures, radio, or television programs for listening, viewing, or broadcast, and related advertising materials for commercial purposes
- property that is sold to a person who is licensed to operate a commercial radio or television station if the property is used to originate or integrate program materials for transmissions that are generally available to the public free of charge
- tangible and digital music sold for exclusive use in a jukebox, except where the sales price of the music is separately indicated from the sales price of the jukebox
- computers and servers that are used to store copies that are sent to a printing press and property

purchased from out-of-state sellers that is temporarily stored in this state and then delivered and used outside of this state, for commercial printing, book printing, or support activities for printing

- printed advertising material for out-of-state use
- catalogs, and the envelopes in which the catalogs are mailed, designed to advertise and promote the sale of merchandise of individual business firms
- property that becomes a component part of a waste treatment facility
- equipment and parts used exclusively for waste reduction or recycling
- equipment used in maple syrup production
- certain equipment used in logging
- wood residue used as fuel in a business activity
- fuel consumed by boats during business associated with chartered fishing by persons possessing a sport trolling license
- certain products, and electricity or energy produced from such a product, whose power source is wind energy, direct radiant energy received from the sun, or gas generated from certain types of anaerobic digestion, if the product produces a certain amount of energy per day
- machinery and equipment, as well as property or items that lose their identity, used in qualified research that are sold to: (a) a person engaged in manufacturing in this state at a building assessed as a manufacturing property; (b) a person engaged primarily in biotechnology in this state; or (c) a "combined group" member who is conducting qualified research for another

combined group member described in "a" or "b" [In general, under income and franchise tax law, a combined group of corporations is a group of firms that have common ownership and conduct a unitary business.]

- sales of certain items and property that are used in raising animals that are sold primarily to a biotechnology business, an institution of higher education, or a governmental unit for use in qualified research or manufacturing
- commercial boats, barges, parts, and fuel engaged in interstate or foreign commerce or commercial fishing
- building materials used to construct, develop, or renovate a home stadium for any professional athletic team participating in a multistate league
- railroad cars including parts and fuel
- raw materials incorporated into printed material for out-of-state use
- live game birds and clay pigeons sold to bird hunting preserves and clay pigeons sold to certain trapshooting facilities
- farm-raised deer sold to a person operating a hunting preserve or game farm
- clay pigeons sold to nonprofit gun clubs that provide gun safety classes to at least 25 individuals in a calendar year or whose admission qualifies as an occasional sale, or to a gun club whose sales price for admissions are taxable
- certain sales of tangible personal property or taxable services to business affiliates
- snowmaking and snow-grooming machines and equipment, as well as fuel and electricity used to operate the machines and equipment, that are used for snowmaking and snow-grooming at ski

hills, ski slopes, and ski trails

- advertising and promotional direct mail
- machines and specific processing equipment used in a fertilizer blending, feed milling, or grain drying operation, including various holding structures used for weighing and dropping feed or fertilizer ingredients into a mixer or for storage of grain
- building materials for the construction or repair of holding structures used for weighing and dropping feed or fertilizer ingredients into a mixer or for storage of grain
- building materials purchased by a construction contractor that become a part of a facility to be transferred to a local unit of government, an institution of higher education, a state veterans organization, a nonprofit organization organized exclusively for religious, charitable, scientific, or educational purposes, or for the prevention of cruelty to animals, or certain title holding companies, where a facility includes a building, shelter, parking lot or garage, athletic field or park, storm sewer, water supply system, or sewerage and waste water treatment facility, but not a highway, street, or road
- building materials, supplies, and equipment and the sale of services and the storage, use, or other consumption of the same property and services acquired solely for or used solely in, the initial construction and development of the Milwaukee Bucks basketball sports and entertainment arena facilities
- property and services that are used solely in the construction or development of facilities located in an electronics and information technology manufacturing zone, and if the capital expenditures for the construction of such facilities may be claimed as a credit as certified by the Wisconsin Economic Development Corporation

Farms

- farm tractors and machines, including parts, lubricants, nonpowered equipment, and other tangible personal property used or consumed in the business of farming
- seeds, plants, feed, fertilizer, pesticides and related chemicals, fuel, livestock, wire and twine, animal bedding, milkhouse supplies, plastic sheeting, and certain containers used in farming
- drugs used on farm livestock, not including workstock, or on bees
- animal tags and standard milk samples sold by the Department of Agriculture, Trade and Consumer Protection
- livestock semen used for artificial insemination
- electricity sold for farm use
- fuel sold for use in farming
- sales of farm-raised fish sold to a registered fish farm or to an individual with a valid permit for stocking fish

Exempt Entities

- sales to certain governmental, educational, scientific, religious, and charitable organizations, and to any affiliates organized solely to collect income for any of the above entities
- sales to state veterans organizations, except equipment and property used in food and beverage sales
- sales to certain nonprofit cemeteries
- sales to federally recognized American Indian tribes or bands in this state
- admission fees to state parks and forests and

state park camping fees

- sales of tangible personal property by elementary and secondary schools
- admission to Circus World Museum and to county fairs
- sales of tickets, admissions, items, and property by American Legion baseball teams
- tickets or admissions to elementary and secondary school activities
- fire trucks and firefighting equipment sold to a volunteer fire department
- charges imposed by an authority for copies of public records
- sales to U.S. government agencies and U.S. government-owned corporations
- sales by a home exchange service that is operated by the Department of Veterans Affairs
- snowmobile trail grooming equipment and attachments sold to snowmobile clubs
- food and food ingredients, except soft drinks, sold by hospitals, sanatoriums, nursing homes, retirement homes, community-based residential facilities, child welfare agencies, and child care facilities, and prepared food sold to elderly or handicapped persons providing mobile meals on wheels
- admissions by a nonprofit gun club, including the sale of a gun club membership, if the gun club provides safety classes to at least 25 individuals in a calendar year
- sales of admissions by a nonprofit organization to participate in any sports activity in which more than 50% of the participants are 19 years old or younger

- occasional sales of tangible personal property, certain other property, or services made by a nonprofit organization are generally exempt from the sales tax if the sales occur on 75 days or fewer per year, or if the receipts from such sales do not exceed \$50,000; admissions to an event involving entertainment may fit within the scope of this exemption if the aggregate amount paid for the performance does not exceed \$10,000

Medical Supplies

- prescription drugs for human beings, including drugs furnished free of charge to health care providers
- durable medical equipment and accessories that are for use in a person's home, mobility-enhancing equipment, and prosthetic devices if the equipment or devices are used for a human being
- supplies used to determine blood sugar level
- veterinary services
- sales of patient health care records that are sold to the patient or to a person the patient authorizes to receive the records

Family Purchases

- motor vehicle sales, including sales of off-highway motorcycles, to certain family members
- purchase of used mobile homes and used manufactured homes for use as a residence
- 35% of the sales price for a new manufactured home
- 35% of the sales price of certain modular homes or the sales price minus the cost of materials that became component parts of a building being sold
- food and food ingredients, except candy,

soft drinks, and dietary supplements

- prepared food sold by a retailer if the retailer: (a) manufactures the prepared food in a building assessed as manufacturing property; (b) makes no retail sales of prepared food at such a property; and either (c) freezes the prepared food prior to its sale and sells the prepared food at retail in a frozen state without accompanying eating utensils; and/or (d) sells prepared food that consists of more than 50% yogurt

- food sold through vending machines that would be exempt if sold in a grocery store

- caskets and burial vaults

- electricity and natural gas sold for residential purposes from November through April

- coal, fuel oil, propane, steam, biomass, peat fuel cubes produced from solid waste, and wood sold for residential fuel (applies throughout the year) for use in a person's permanent, principal residence

Other Sales Tax Exemptions

- sales prohibited from taxation under federal law or the state constitution

- United States flag and the flag of the State of Wisconsin

- newspapers, shoppers guides, and periodicals sold by subscription or transferred without charge to the recipient

- water delivered through mains

- sales of property and services under a contract entered into prior to such property being made taxable (however, purchaser is subject to use tax)

- separately stated interest

- motor vehicle, aviation, and alternate fuel subject to Wisconsin excise tax

- sales of vegetable oil or animal fat that is converted into motor fuel that is exempt from the state motor fuel tax under the exemption for personal renewable fuel

- aircraft and motor vehicles for use outside the state

- parts used to modify or repair aircraft

- occasional sales, defined as those made by a seller whose total taxable sales price from sales of tangible personal property and taxable services is less than \$2,000 during a calendar year, except for bingo receipts and most motor vehicle sales

- sale of food and food ingredients furnished in accordance with a contract with a higher education institution to students or National Football League teams

- candy, soft drinks, dietary supplements, prepared foods, and disposable products transferred with meals provided for no consideration by restaurants to employees during work hours

- sales to common or contract carriers, if the property is delivered by that carrier to a location out-of-state

- sales to a purchaser who takes delivery outside the U.S.

- low-income assistance fees charged by electric utilities and electric cooperatives

- a license or right to purchase admission to professional football games at the Green Bay Packer stadium, which entitles the purchaser to purchase admission to at least three professional football games in a single football season

- railroad crossties to common or contract carriers shipped by that carrier to a point outside

the state

- telecommunication services, including purchase reauthorization numbers, obtained by using the rights to purchase such services by paying in advance and by using both an access number and an authorization code.

- sale of a service provided by an electric cooperative to another electric cooperative, or a telecommunications utility to another telecommunications utility, for disaster relief work performed during a disaster period

- digital goods if the purchase of such goods sold in tangible form is exempt from the sales tax

- sales of video or electronic games sold in tangible form to a person providing a taxable service through an amusement device if the video or electronic game is used exclusively for an amusement device, sales of tangible personal property used exclusively as a prize from the use of the amusement device, and tournament or league entrance fees advertised and set aside as prize money

- taxable items that are bundled with exempt items (such as a gift basket) and sold by the seller for one nonitemized price if the amount of the taxable products does not exceed 10% of the total bundled transaction

- taxable items that are bundled with exempt items by the seller for one nonitemized price if the bundled item contains food and food ingredients, drugs, durable medical equipment, mobility-enhancing equipment, prosthetic devices, or medical supplies and if the taxable portion of the bundled transaction does not exceed 50% of the total sales price in the bundled transaction

- charges for the police and fire protection fee

- charges for countywide "911" emergency phone systems

- sales price from the rental of a mobile or manufactured home for longer than one month

Use Tax Exemptions

- receipts from the purchase of property, if such receipts are included in sales receipts subject to the sales tax

- automobile dealer loan of a motor vehicle to a school driver education program

- aircraft based in Wisconsin that was purchased out-of-state by a nonresident for which sales and use tax has been paid in the state of purchase

- household goods, boats, and various vehicles brought into the state with owners who move to Wisconsin

- donations of inventory to certain government units and nonprofit organizations

- state and federal motor fuel taxes that are refunded to exempt purchasers of fuel

- tangible personal property purchased outside of Wisconsin by an out-of-state business and brought into Wisconsin for use solely in disaster relief work.

Exemptions Arrived at Through the Definition of Taxable Sales

- sales for resale (that is, wholesale sales are generally exempt, but retail sales made by a wholesaler are taxable)

- certain discounts, terms, or coupons that are not reimbursed by a third party that are taken by a purchaser on a sale

- interest, financing, and carrying charges from credit that is extended on sales if separately

stated on the invoice

- separately stated taxes that are legally imposed directly on the purchaser
- separately stated delivery charges for direct mail
- the trade-in value allowed as part of the purchase of a motor vehicle or other personal property
- certain transfers of property to or from a corporation, limited liability company, or partnership; cash discounts; cash or credit refunds on returned property
- certain transfers of transmission facilities to

an electric transmission company

- detailed telecommunications billing services that separately indicate information pertaining to individual calls on a customer's billing statement
- installing or applying services to property, items, or goods that will constitute an addition or capital improvement to real property when installed, and installation or replacement services that is a real property construction activity
- a product that is provided free of charge to a purchaser who must also purchase another product that is subject to sales tax if the purchase is made in the same transaction
