

# INITIAL REGULATORY FLEXIBILITY ANALYSIS

## Department of Safety and Professional Services

RULE NO.: Chapters Comm 41 and 45

RELATING TO: Boilers and Pressure Vessels

1. Types of small businesses that will be affected by the rules.

Any business involved with the design, construction, installation, operation, inspection, testing, maintenance, repair and alteration of boilers and pressure vessels that are installed for public buildings or places of employment.

2. Reporting, bookkeeping and other procedures required for compliance with the rules.

The rule revisions would not require any new reporting or other bookkeeping. They would clarify that reports for both installation and periodic inspections are sent to the Department primarily through its electronic data interchange transfer system. They would apply the current timeframes for filing periodic-inspection reports to both installation and periodic inspections, rather than only periodic inspections. They would also reduce the application of the accident-reporting requirements to only where injuries occur that need more than first aid treatment

3. Types of professional skills necessary for compliance with the rules.

No new professional skills would be needed.

4. Rules have a significant economic impact on small businesses.

No Rules not submitted to Small Business Regulatory Review Board

Yes Rules submitted to Small Business Regulatory Review Board
