This rule modifies current rules related to the use of atrazine, an agricultural herbicide that has been widely used for many years. Atrazine has been found in groundwater in many areas of the state.

The Department of Agriculture, Trade and Consumer Protection (DATCP) currently regulates atrazine use to protect Wisconsin groundwater. Current DATCP rules do all the following:

- *Specify maximum atrazine use rates.* These rates are about half the rates normally allowed under the federal label.
- *Limit the timing of atrazine applications.* Under current rules, atrazine applications are allowed only between April 15 and July 31.
- *Prohibit atrazine use on 1.2 million acres of land.* Current rules prohibit atrazine use in 102 designated areas where contamination has been found at or above groundwater enforcement standards adopted by the Department of Natural Resources. Atrazine mixing and loading operations are also prohibited unless conducted over a spill containment surface.

This rule makes the following changes to current rules:

- It expands one current prohibition area by 3,200 acres, based on new groundwater test data.
  - It extends, by 2 weeks, the annual time period within which persons may apply atrazine. Under this rule, atrazine may be applied between April 1 and July 31. This change will give farmers more flexibility to apply atrazine earlier in the year. The change is not expected to have a significant adverse effect on the environment.
