Assumptions Used in Arriving at Fiscal Estimate:

2017 Wisconsin Act 59 provided that the Department of Revenue shall promulgate rules to establish criteria for field audit statistical sampling.

This rule order makes changes to reflect current law and current department audit practices as provided in Department of Revenue Publication 516, *Statistical Sampling*.

The rule provides that for businesses under audit with less than \$10,000,000 in annual sales, the business may request its audit be conducted using the statistical sampling method. The maximum number of sample units selected for review for each sample population from which a statistical sample is drawn may not exceed 10 percent of the sample population or 15,000 transactions, whichever is less. This limitation does not apply if the relative precision of the sample is greater than 20 percent.

The rule codifies current Department of Revenue audit practices and is not expected to have an impact on audit collections or administrative costs. However, the limits to sample size may negatively impact precision in some cases. This may result in higher or lower individual assessment amounts than under current practices.
