Rule Information

The proposed rule creates ch. NR 119 to establish a methodology and process for establishing site-specific phosphorus criteria for surface waters. Initial Regulatory Flexibility Analysis

Because this rule simply clarifies and documents a process for conducting a review already expressly allowed in existing code, the creation of this rule is not expected to incur costs. The processes outlined in this rule are similar to those that the Department has followed under the existing rule, NR 102.06(7). Small businesses that may be interested in this rule include those with a permitted water discharge or that provide tourism/recreation-based services. Such entities may have an interest in using the processes established in this rule to develop a proposed SSC. By specifying the type of demonstration that needs to be made to support an SSC, the rule may save requestors costs and time by streamlining their study design and reducing the time needed for SSC approval.
