Pulling a boat, camper or trailer? Make sure it's properly attached or the results could be disastrous. State law requires that the ball and hitch coupling assembly be the same size and latch securely. Also, two safety chains of proper length and strength must be attached between the vehicle and the trailer with just enough slack to allow proper turning. It's also a good idea to crisscross the safety chains to create a cradle that can catch the tongue of the trailer and prevent it from striking the pavement if an unexpected disconnection occurs.
