WISCONSIN STATE DOCUMENT DEPOSITORY LIBRARIES

Most of the data presented in the statistical section of the *Wisconsin Blue Book* are based on information compiled by the federal government and Wisconsin state agencies. Persons wishing to consult the original sources for further information may find them at one of following depository libraries or may borrow many of them from libraries throughout the state on interlibrary loan. State depository libraries are designated to receive copies of all collected publications. Regional depository libraries receive approximately three-quarters of all collected publications, and selective depository libraries receive two-thirds.

HIGHLIGHTS OF AGRICULTURE IN WISCONSIN

Farm Production — In 2009, Wisconsin ranked first nationally in the production of cheese (including leading the nation with 40% of domestic Muenster production, 29% of Italian production, and 20% of American production) and dry whey products and second to California in the production of milk and butter. In crop production, it ranked first in corn for silage, oats, cranberries, and snap beans for processing. It was among the top five producers of forage, potatoes, tart cherries, maple syrup, carrots for processing, sweet corn for processing, green peas for processing, and cucumbers for pickles. Wisconsin is also the leading producer of mink pelts and milk goats in the country. As befits the state known as “America’s Dairyland”, Wisconsin had more milk cows than any other state in the nation except California, with over 1.26 million head, about 14% of the nation’s total.

Cash Receipts and Income — Total net Wisconsin farm income was \$849.4 million in 2009, a decrease of approximately \$1.8 billion since 2007. Wisconsin ranked 24th nationally in total net farm income in 2009, down from 8th in 2007. California led the nation in farm income for 2009 with about \$8.8 billion, while Utah, with a net loss of \$52 million, ranked last.

Total cash receipts for Wisconsin farm products marketed in 2009 amounted to over \$7.6 billion. California led the nation that year in total cash receipts from farm marketings at \$34.8 billion. Dairy products accounted for 41.6% of Wisconsin’s cash receipts from farm marketings in 2009, with feed, oil, and food crops providing 22% and meat animals 10.5%.

Number and Size of Farms — From 2005 to 2010, the number of farms in the nation increased by 102,240 to 2,200,930; in Wisconsin, the number increased from about 76,500 to 78,000. Until the 1990s, the number of Wisconsin’s farms had decreased fairly steadily from a peak of 199,877 in 1935, but the decline slowed in recent years, and has now begun to reverse itself. Wisconsin farmland decreased from 23.5 million acres to 15.2 million acres between 1935 and 2010, and the average farm size increased from 117 acres to 195 acres over the same period.

Value of Farms and Farmland — Land and buildings on Wisconsin farms were valued at about \$57 billion in 2009, a decrease of \$1.5 billion or 2.5% from 2008. The average value per farm decreased from \$750,256 in 2008 to \$730,796 in 2009. The average value per acre in 2009 was \$3,750, a decrease of \$100 compared to 2008 values.

The average price for agricultural land sold in Wisconsin during 2009 was \$4,072 per acre, a decrease of about \$100 from the \$4,185 average selling price in 2008. Land continuing in agricultural use after sale sold for a statewide average of \$3,927 per acre in 2009; agricultural land that sold for other uses was purchased for an average price of \$5,635 per acre.

Farm Assets and Debts — Wisconsin farms recorded assets of \$826,882 per farm in 2009 and debt of \$93,397 per farm for a debt-to-asset ratio of 12%.

The following tables present selected data. Consult footnoted sources for more detailed information on agriculture.

Notes: "Farm" is currently defined as a place that sells, or would normally sell, at least \$1,000 of agricultural products during the year. The actual number of farms in Wisconsin peaked at 199,877 in 1935. Total Value Average per Farm figures calculated by Wisconsin Legislative Reference Bureau. Prior year's numbers have been revised to reflect updated source data.

¹Value of agricultural sector output is the gross value of the commodities and services produced within a year.

²Includes purchases of feed, livestock, poultry, and seed; outlays for fertilizers and lime, pesticides, fuel and electricity; capital repair and maintenance; and marketing, storage, transportation, contract labor, and other expenses.

³Net value added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors of production, regardless of ownership.

⁴Includes compensation for hired labor, net rent received by nonoperator landlords, and interest payments.

⁵Net farm income is the farm operators' share of income from the sector's production activities.

*Equity data for Washington farms is not available because of small sample size.

¹"Farm" is currently defined as a place that sells, or would normally sell, at least \$1,000 of agricultural products during the year.

²Dollar amounts represent farm businesses, excluding household assets and debts.

³Debt does not include all financial obligations that are contained in the liabilities column.
